

# The Statistics of Inheritance

How can statistics help predict the traits of offspring?

## Why?

The randomization of alleles from the parents' genetic material is essential to the survival and evolution of a species. If the combinations of alleles that make up the genetic material in a zygote are truly random, the laws of statistics can be used to predict what traits the offspring will have. This activity starts with a review of Punnett squares, which is one way to make predictions about simple allele combinations. Statistics will then be used to make mathematical predictions about the genotypes of offspring.

## Model 1 – Punnett Squares

- Consider the beetle species in Model 1.
  - How many phenotypes for exoskeleton color are exhibited in the population?
  - How many genotypes for exoskeleton color are exhibited in the population?
- According to Model 1, which allele, B or b, is the dominant exoskeleton color allele? Justify your answer with specific evidence from Model 1.

*Evolving Ourselves* Juan Enriquez,Steve Gullans,2015-11-05 If Darwin were alive today he would likely recognize that technology has evolved so far and so fast that the origin evolution and future of life itself is no longer just driven by natural selection and random mutation Why are genetic conditions like autism asthma and allergies on the rise at unprecedented biologically impossible speeds What traits does our world select for and what does that mean for us Will our children be a different species Today s humans have altered the nature of our world so much and developed such profound capabilities for re crafting our bodies and environment that random mutation and natural selection are no longer the primary determinants of which species survives and how they change over time The nature of the evolution of our world is now increasingly defined

and driven by Un Natural Selection where the traits being selected for have little to nothing to do with our ability to survive and thrive and Non Random Mutation in which drastic changes to our environment wreak havoc on what gene are expressed and passed down Evolving Ourselves is the story of how our massive human perturbation and increasingly our specific designs and desires are altering life on Earth It is a chronicle of where our remarkable new capabilities for altering our bodies other living creatures and our environment are taking us in the near term and introduces the possibility that we might cause our own extinction in the long run      **5 Steps to a 5 on the Advanced Placement Examinations** Mark
