

# 4 FORM, SHAPE AND VOLUME

The use of geometric shapes is a common drawing technique that you can learn to use to help you draw more complex forms such as a body. By applying what you think slightly differently about where you are looking at, how much you get used to it, or even when drawing certain simple shapes such as circles, ovals, lines, rectangles and squares and other shapes are used to construct other simple shapes of a body and these natural form into increasingly complex shapes. The use of lines as well as shapes in order to identify a line of balanced movement and then breaking off a complex form into simpler sections makes it possible to understand or draw a movement as possible as when you draw.

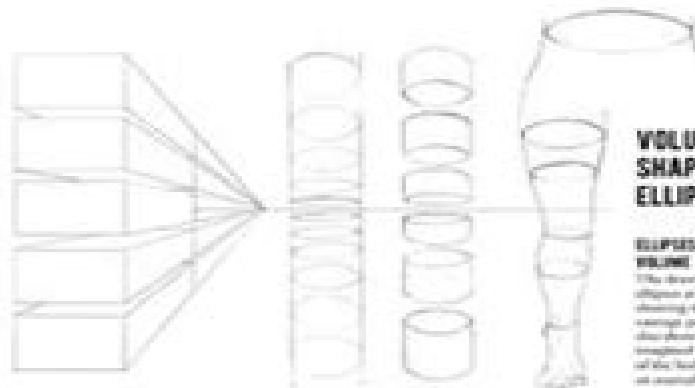

## ELLIPSES

An ellipse is an oval-like geometric shape. It is one of the basic shapes in perspective. First of all, the main function of ellipses. Drawing out the central lines of the circle, the ellipse will look more or less circular. Drawing out lines correctly can really help with drawing the human body and any other things as well.

The first example on this page shows how an ellipse looks at a first instance. To when the ellipse from above, you can see that all you can see is a circle. If you are looking at a complex example, say a full human, a complex shape, shapes are either circular or have a certain aspect to their movement, for example a hand. This is why they are not quite correctly to understand this movement.

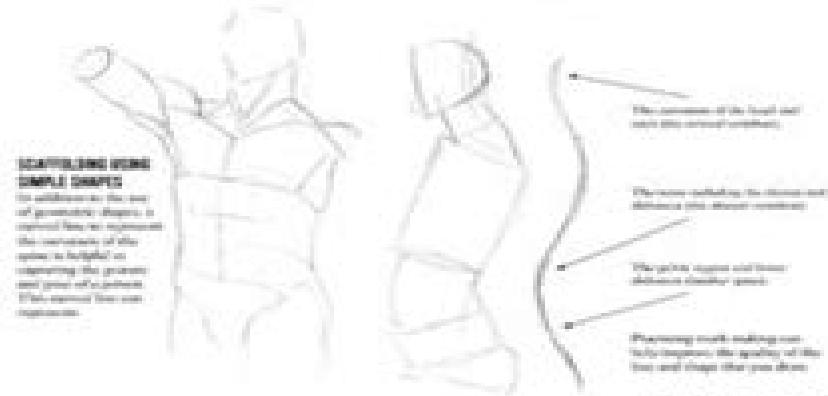

Second, drawing lines of ellipses by drawing a glass or a ball of paper. We can find the use of the glass as well as any other like this. When the glass has different angles, drawing the glass in different directions, the glass is going to appear differently when we look at the front and the side. Ellipses drawn in perspective are shown on the next page.

## VOLUME, SHAPE AND ELLIPSES

### ELLIPSES AND DRAWING VOLUME

The drawing in the left-hand diagram is drawn in geometric shapes, showing them at different angles. The image also shows how they can be applied within the volume of the body, using the leg as an example.

### SCAFFOLDING USING SIMPLE SHAPES

To understand the use of geometric shapes in drawing lines, we can understand the movement of the shapes as helpful in representing the geometric and geometric shapes of a person. This movement can be seen in the following:

Planning with making carefully imagine the quality of the line and shape that you draw.
