Scientific Inquiry Cycle: Review

Science helps researchers solve problems by applying knowledge and creating finding others' based with a test. Many such as understanding or waste management using science to create or improve solutions can have a positive impact. Understanding the problem fully, including its causes and effects, is the first step in finding an effective solution.

Designing solutions requires considering various constraints, such as budget, time, and safety concerns. Documenting the part of a solution might face challenges, as it is important to weigh trade-offs carefully. For example, creating materials for a house that may affect its cost and ease of use, which influence the effectiveness of the solution.

After developing a solution, documenting how it works, what constraints affected it, and any compromises made helps others learn and possibly improve on the idea. Communication, sharing findings clearly, and reflecting on the impacts of the innovation are essential steps. This process encourages sharing ideas, healthy challenges, responsible decision-making, and team communication.
