Schneider, 2018-10-10 This handbook unifies access and opportunity two key concepts of sociology of education throughout its 25 chapters It explores today's populations rarely noticed such as undocumented students first generation college students and LGBTQs and emphasizing the intersectionality of gender race ethnicity and social class Sociologists often center their work on the sources and consequences of inequality This handbook while reviewing many of these explanations takes a different approach concentrating instead on what needs to be accomplished to reduce inequality A special section is devoted to new methodological work for studying social systems including network analyses and school and teacher effects Additionally the book explores the changing landscape of higher education institutions their respective populations and how labor market opportunities are enhanced or impeded by differing postsecondary education pathways Written by leading sociologists and rising stars in the field each of the chapters is embedded in theory but contemporary and futuristic in its implications This Handbook serves as a blueprint for identifying new work for sociologists of education and other scholars and policymakers trying to understand many of the problems of inequality in education and what is needed to address them

*Measuring Service Performance* Ralf Lisch, 2016-05-06 In service societies the tertiary sector has long become the primary sector in terms of GDP and employment Quality research and testing means better service and success in the service industries demands quality Nonetheless complaints about insufficient inconsistent or bad service abound Quality decides on success and failure Where so much is at stake management decisions call for systematic research and consumers look for relevant results that provide guidance in complex markets Research into quality and customer satisfaction gets to the core of a business However many so called studies hardly meet essential criteria of empirical research and deliver artefacts rather than facts This book puts an end to common misconceptions of quality studies *Measuring Service Performance* is an appeal for an approach to quality research that meets quality criteria itself It is a compelling argument against widespread but rather dubious dealings with measurement data and statistics Ralf Lisch calls for a reconsideration of the research process focussing on content instead of method and adding meaning to results Because service excellence deserves research excellence Written in a practical accessible style the book offers practitioners as well as market researchers MBA students

and others involved in the service sector a critical analysis and discussion of the essentials of Practical Research for Better Quality

An Age of Accountability John L. Rury, 2023-10-13 An Age of Accountability highlights the role of test based accountability as a policy framework in American education from 1970 to 2020 For more than half a century the quest to hold schools and educators accountable for academic achievement has relied almost exclusively on standardized assessment The theory of change embedded in almost all test based accountability programs held that assessment with stipulated consequences could lead to major improvements in schools This was accomplished politically by proclaiming lofty goals of attaining universal proficiency and closing achievement gaps which repeatedly failed to materialize But even after very clear disappointments no other policy framework has emerged to challenge its hegemony The American public today has little confidence in institutions to improve the quality of goods and services they provide especially in the public sector As a consequence many Americans continue to believe that accountability remains a vital necessity even if educators and policy scholars disagree
