Opportunities in Intense Ultrafast Lasers National Academies of Sciences, Engineering, and Medicine,Division on Engineering and Physical Sciences,Board on Physics and Astronomy,Committee on Opportunities in the Science, Applications, and Technology of Intense Ultrafast Lasers,2018-03-03 The laser has revolutionized many areas of science and

society providing bright and versatile light sources that transform the ways we investigate science and enables trillions of dollars of commerce. Now a second laser revolution is underway with pulsed petawatt class lasers 1 petawatt 1 million billion watts that deliver nearly 100 times the total world's power concentrated into a pulse that lasts less than one trillionth of a second. Such light sources create unique extreme laboratory conditions that can accelerate and collide intense beams of elementary particles, drive nuclear reactions, heat matter to conditions found in stars or even create matter out of the empty vacuum. These powerful lasers came largely from U.S. engineering and the science and technology opportunities they enable were discussed in several previous National Academies reports. Based on these advances the principal research funding agencies in Europe and Asia began in the last decade to invest heavily in new facilities that will employ these high intensity lasers for fundamental and applied science. No similar programs exist in the United States. Opportunities in Intense Ultrafast Lasers assesses the opportunities and recommends a path forward for possible U.S. investments in this area of science.

Greenwashing Sport Toby Miller, 2017-07-06 Professional sports promote their green credentials and yet remain complicit in our global environmental crisis. Sports are responsible for significant carbon footprints through stadium construction and energy use, player and spectator travel and media coverage. The impact of sports on climate change is further compounded by sponsorship deals with the gas and petroleum industries imbuing those extractive corporations with a positive image by embedding them within the everyday pleasure of sport. Toby Miller argues that such activities amount to greenwashing. Scrutinizing motor racing, association football and the Olympics, Miller weighs up their environmental policies, their rhetoric of conservation and sustainability and their green credentials. The book concludes with the role of green citizenship and organic fan activism in promoting pro environmental sports. This is a must read for students and researchers in media communications, sociology, cultural studies and environmental studies.

Physics Briefs, 1994 An Invitation to Environmental Sociology Michael Mayerfeld Bell, Loka L. Ashwood, Isaac Sohn, Leslie, Laura Hanson Schlachter, 2020-09-23

If there were ever a time for environmental sociology it is now. As COVID 19 is spreading across our communities, our countries, our world we have all become too familiar with maintaining that awful term of social distance. Yet there can be no true distance from that which is always with us and within us our social ecology. An Invitation to Environmental Sociology invites students to delve into this rapidly changing field. Written in a lively, engaging style the authors cover a broad range of topics in environmental sociology with a personal passion rarely seen in sociology texts. The book's unique organization explores three different kinds of questions about interactions between humans and the natural world the material, the ideal and the practical. The Sixth Edition of this bestseller comprises 12 chapters instead of 13, making it easier to fit into the normal rhythm of a course. But the result is also an edition that is up to date and enriched with much newer material while continuing to use an inviting tone that the title promises. Included with this title The password protected Instructor Resource Site, formally known as SAGE Edge, offers access to all text specific resources including a test bank and editable chapter
