

**MARK SCHEME for the May/June 2006 question paper**

**9709 MATHEMATICS**

9709/02

Paper 2

Maximum raw mark 50

This mark scheme is published as an aid to teachers and students, to indicate the requirements of the examination. It shows the basis on which Examiners were initially instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began. Any substantial changes to the mark scheme that arose from these discussions will be recorded in the published *Report on the Examination*.

All Examiners are instructed that alternative correct answers and unexpected approaches in candidates' scripts must be given marks that fairly reflect the relevant knowledge and skills demonstrated.

Mark schemes must be read in conjunction with the question papers and the *Report on the Examination*.

The minimum marks in these components needed for various grades were previously published with these mark schemes, but are now instead included in the *Report on the Examination* for this session.

- CIE will not enter into discussion or correspondence in connection with these mark schemes.

CIE is publishing the mark schemes for the May/June 2006 question papers for most IGCSE and GCE Advanced Level and Advanced Subsidiary Level syllabuses and some Ordinary Level syllabuses.

**Well-Quasi Orders in Computation, Logic, Language and Reasoning** Peter M. Schuster, Monika Seisenberger, Andreas Weiermann, 2020-01-01 This book bridges the gaps between logic mathematics and computer science by delving into the theory of well quasi orders also known as wqos This highly active branch of combinatorics is deeply rooted in and between many fields of mathematics and logic including proof theory commutative algebra braid groups graph theory analytic combinatorics theory of relations reverse mathematics and subrecursive hierarchies As a unifying concept for slick finiteness or termination proofs wqos have been rediscovered in diverse contexts and proven to be extremely useful in computer science The book introduces readers to the many facets of and recent developments in wqos through chapters contributed by scholars from various fields As such it offers a valuable asset for logicians mathematicians and computer scientists as well as scholars and students

**Mathematical Reviews**, 2007 [Embedded Random Matrix Ensembles in Quantum Physics](#) V.K.B. Kota, 2014-07-08 Although used with increasing frequency in many branches of physics random matrix ensembles are not always sufficiently specific to account for important features of the physical system at hand One refinement which retains the basic stochastic approach but allows for such features consists in the use of embedded ensembles The present text is an exhaustive introduction to and survey of this important field Starting with an easy to read introduction to general random matrix theory the text then develops the necessary concepts from the beginning accompanying the reader to the frontiers of present day research With some notable exceptions to date these ensembles have primarily been applied in nuclear spectroscopy A characteristic example is the use of a random two body interaction in the framework of the nuclear shell model Yet topics in atomic physics mesoscopic physics quantum information science and

statistical mechanics of isolated finite quantum systems can also be addressed using these ensembles This book addresses graduate students and researchers with an interest in applications of random matrix theory to the modeling of more complex physical systems and interactions with applications such as statistical spectroscopy in mind Let's Face Chaos Through Nonlinear Dynamics Marko Robnik,Valery Romanovski,2008-12-04 This volume contains papers written by the invited lecturers and the contributors short reports and posters The papers do not necessarily cover exactly one to one what has been presented at the conference for that we would need at least one thousand pages but contains the material related to the presentations either in the sense of a review 20% or in the sense of a new original contribution 80% The volume is a valuable source of scientific information in the general field of nonlinear science in its broadest sense namely in the fundamental and applied physics and in the interdisciplinary physics **Challenges in Infectious Diseases** I.W. Fong,2012-09-06 This next volume in the series will provide up to date Information and discussion on future approach to control several challenging Infectious Disease worldwide The past decade has been highlighted by numerous advances in research of medical scientific knowledge medical technology and the biological and diagnostic techniques but somewhat less dramatic changes or improvement in management of medical conditions This volume will address some of the emerging issues challenges and controversies in Infectious Diseases **Graduate Programs in the Physical Sciences, Mathematics, Agricultural Sciences, the Environment, and Natural Resources 2009** Peterson's,2007-11 The six volumes of Peterson's Annual Guides to Graduate Study the only annually updated reference work of its kind provide wide ranging information on the graduate and professional programs offered by accredited colleges and universities in the United States and U S territories and those in Canada Mexico Europe and Africa that are accredited by U S accrediting bodies Books 2 through 6 are divided into sections that contain one or more directories devoted to individual programs in a particular field Book 4 contains more than 3 800 programs of study in 56 disciplines of the physical sciences mathematics agricultural sciences the environment and natural resources **High-Performance Modelling and Simulation for Big Data Applications** Joanna Kołodziej,Horacio González-Vélez,2019-03-25 This open access book was prepared as a Final Publication of the COST Action IC1406 High Performance Modelling and Simulation for Big Data Applications cHiPSet project Long considered important pillars of the scientific method Modelling and Simulation have evolved from traditional discrete numerical methods to complex data intensive continuous analytical optimisations Resolution scale and accuracy have become essential to predict and analyse natural and complex systems in science and engineering When their level of abstraction raises to have a better discernment of the domain at hand their representation gets increasingly demanding for computational and data resources On the other hand High Performance Computing typically entails the effective use of parallel and distributed processing units coupled with efficient storage communication and visualisation systems to underpin complex data intensive applications in distinct scientific and technical domains It is then arguably required to have a seamless interaction of High Performance

Computing with Modelling and Simulation in order to store compute analyse and visualise large data sets in science and engineering Funded by the European Commission cHiPSet has provided a dynamic trans European forum for their members and distinguished guests to openly discuss novel perspectives and topics of interests for these two communities This cHiPSet compendium presents a set of selected case studies related to healthcare biological data computational advertising multimedia finance bioinformatics and telecommunications

**Biodiversity** Edmundas Lekevičius, 2022-09-20 Species are not functionally independent From a long term perspective only ecosystem with a fully integrated nutrient cycle is alive The lack of trophic autonomy should be considered one of the key factors that ensure and maintain biodiversity The variability of abiotic conditions both in space and in time also creates a huge diversity of niches and subniches for genotypes and species In addition life maintains its essential variables biomass and productivity as stable as possible due to the diversity of structures genes macromolecules metabolic pathways genotypes species etc the structures that reach optima are multiplied and thus activated while the functioning of those which lost their optima is suppressed The facts and concepts presented in this monograph thus support the conclusions that a genotype and species diversity is supported by trophic specialisation b biodiversity helps to stabilise the functions essential variables of individuals populations and ecological communities c in evolution the emergence of biodiversity is determined by heritable variation and the advantage of specialised more effective structures over non specialised ones d biodiversity is characterised by its ability to increase itself and to organise itself into relatively consistent structures which we call production pyramids and nutrient cycles This book therefore provides an answer to the question why the diversity of life is of such and such a nature

*Centering Humanism in STEM Education* Bryan Dewsbury, Susannah McGowan, Sheila S. Jaswal, Desiree Forsythe, 2024-09-24 Research demonstrates that STEM disciplines perpetuate a history of exclusion particularly for students with marginalized identities This poses problems particularly when science permeates every aspect of contemporary American life Institutions repeated failures to disrupt systemic oppression in STEM has led to a mostly white cisgender and male scientific workforce replete with implicit and or explicit biases Education holds one pathway to disrupt systemic linkages of STEM oppression from society to the classroom Maintaining views on science as inherently objective isolates it

from the world in which it is performed STEM education must move beyond the transactional approaches to transformative environments manifesting respect for students social and educational capital We must create a STEM environment in which students with marginalized identities feel respected listened to and valued We must assist students in understanding how their positionality privilege and power both historically and currently impacts their meaning making and understanding of STEM
