

Atmospheric Refraction

Electromagnetic waves travel through space and may pass through gases, liquids, and solids. All forms of electromagnetic radiation slow when passing through materials, their speed varying with wavelength and type of material. As electromagnetic radiation passes from one medium into another, it may be reflected or refracted (i.e., bent) at the interface. Many optical phenomena involve atmospheric refraction. **Refraction** is the bending of an electromagnetic wave as it travels through a medium of varying density. When light rays pass through air of differing densities (because of changing temperatures), the light rays bend and they can create a distorted image of an object (Figure 1).

Figure 1: Example of refraction when a visible light travels through a glass prism, the wavelengths bend into the colors of the rainbow. [NASA]

A **mirage** is seen when a distant object appears displaced from its true position because of large vertical density variations in the lower atmosphere. The image may appear distorted, inverted, or wavering. If the image appears below its normal position, it is an **inferior mirage**. Seen frequently, an inferior mirage is produced when a large temperature variation forms over warm surfaces, such as roads or a desert. Alternatively, if the image appears above its normal position, it is a **superior mirage**. Less frequently observed, a superior mirage is typically produced by warmer air over cold water or ice.

Visit [Mirages in Finland](#). Examine the very first image of a ship and its mirage.

1. Assuming the actual ship is in a normal position, the mirage appears to be a part of the ship that is located _____ the real vessel.
 - a. above
 - b. on
 - c. below

2. The object in the mirage appears to be _____.
 - a. inverted
 - b. right-side up
3. From this image's position and orientation, the image is also _____ mirage.
 - a. inferior
 - b. superior
4. Based on the type of mirage seen in the picture, you can conclude that the water surface was _____ than the air temperatures.
 - a. warmer
 - b. colder

Next, go to [Atmospheric optics](#). In the center column, click on "Atmospheric Refraction." From the expanded menu list, choose "Inferior mirages (roads)." The default large image is w-415-37 of a vehicle on a road. There is no water on the road. Click on the image to enlarge it.

5. As noted in the photo discussion, there are two inferior mirages in the view. The first is at road level near the vehicle and inverted. The second mirage is at road level nearest the photographer and appears _____ relative to the actual truck view.
 - a. inverted
