Homogenization and Structural Topology Optimization Behrooz Hassani, Ernest Hinton, 2012-12-06 Structural topology optimization is a fast growing field that is finding numerous applications in automotive aerospace and mechanical design processes Homogenization is a mathematical theory with applications in several engineering problems that are governed by partial differential equations with rapidly oscillating coefficients Homogenization and Structural Topology Optimization brings the two concepts together and successfully bridges the previously overlooked gap between the mathematical theory and the practical implementation of the homogenization method The book is presented in a unique self teaching style that includes numerous illustrative examples figures and detailed explanations of concepts The text is divided into three parts which maintains the book s reader friendly appeal

Multiphysics Modeling With Finite Element Methods William B J Zimmerman, 2006-10-25 Finite element methods for approximating partial differential equations that arise in science and engineering analysis find widespread application Numerical analysis tools make the solutions of coupled physics mechanics chemistry and even biology accessible to the novice modeler Nevertheless modelers must be aware of the limitations and difficulties in developing numerical models that faithfully represent the system they are modeling This textbook introduces the intellectual framework for modeling with Comsol Multiphysics a package which has unique features in representing multiply linked domains with complex geometry highly coupled and nonlinear equation systems and arbitrarily complicated boundary auxiliary and initial conditions But with this modeling power comes great opportunities and great perils Progressively in the first part of the book the novice modeler develops an understanding of how to build up complicated models piecemeal and test them modularly The second part of the book introduces advanced analysis techniques The final part of the book deals with case studies in a broad range of application areas including nonlinear pattern formation thin film dynamics and heterogeneous catalysis composite and effective media for heat mass conductivity and dispersion population balances tomography multiphase flow electrokinetic microfluidic networks plasma dynamics and corrosion chemistry As a revision of Process Modeling and Simulation with Finite Element Methods this book uses the very latest features of Comsol Multiphysics There are new case studies on multiphase flow with phase change plasma dynamics electromagnetohydrodynamics microfluidic mixing and corrosion In addition major improvements to the level set method for multiphase flow to ensure phase conservation is introduced

unmanned operation UAVs have been widely used in both civilian operations and military missions including environmental monitoring emergency communications express distribution even military surveillance and attacks for example Given that a range of standards and protocols used in terrestrial wireless networks are not applicable to UAV networks and that some practical constraints such as battery power and no fly zone hinder the maneuverability capability of a single UAV we need to explore advanced communication and networking theories and methods for the sake of supporting future ultra reliable and low latency applications Typically the full potential of UAV network s functionalities can be tapped with the aid of the cooperation of multiple drones relying on their ad hoc networking in network communications and coordinated control Furthermore some swarm intelligence models and algorithms conceived for dynamic negotiation path programming formation flight and task assignment of multiple cooperative drones are also beneficial in terms of extending UAV s functionalities and coverage as well as of increasing their efficiency We call the networking and cooperation of multiple drones as the terminology flying ad hoc network FANET and there indeed are numerous new challenges to be overcome before the idespread of so called heterogeneous FANETs In this book we examine a range of technical issues in FANETs from physical layer channel modeling to MAC layer resource allocation while also introducing readers to UAV aided mobile edge computing techniques
