Description This is the suggested course sequence that allows one core area of science to be studied per semester. You can change the sequence of the semesters per the needs or interests of your student materials for each semester are independent of one another to allow flexibility. Semester 1: Medicine From surgery to vaccines man has made great strides in the field of medicine. Quality of life has improved dramatically in the last few decades alone and the future is bright. But students must not forget that God provided humans with minds and resources to bring about these advances. A biblical perspective of healing and the use of medicine provides the best foundation for treating diseases and injury. In Exploring the History of Medicine author John Hudson Tiner reveals the spectacular discoveries that started with men and women who used their abilities to better mankind and give glory to God. The fascinating history of medicine comes alive in this book providing students with a healthy dose of facts, mini biographies and vintage illustrations. Semester 2: Biology The field of biology focuses on living things from the smallest microscopic protozoa to the largest mammal. In this book you will read and explore the life of plants, insects, spiders and other arachnids, life in water, reptiles, birds and mammals, highlighting God's amazing creation. You will learn about biological classification, how seeds spread around the world, long term storage of energy, how biologists learned how the stomach digested food, the plant that gave George de Mestral the idea of Velcro, and so much more. For most of history, biologists used the visible appearance of plants or animals to classify them. They grouped plants or animals with similar looking features into families. Starting in the 1990's, biologists have extracted DNA and RNA from cells as a guide to how plants or animals should be grouped. Like visual structures, these reveal the underlying design of creation. Exploring the World of Biology is a fascinating look at life from the smallest proteins and spores to the complex life systems of humans and animals.
