```
POST /v1/publications/b45573563f3a/posts HTTP/1.1

  "contentFormat": "html",
  "content": "<p>cache invalidation</p><p>messing things</p>",
  "tags": ["development", "design"],
  "publishStatus": "draft"
}
```

The definition of request data is equal to the regular call to create a post above. The response is identical except for adding one additional field:

| Field         | Type   | Description   |
|---------------|--------|---|
| publicationId | string | ID of the publication this post was created under. This matches the publication ID requested in the URL of the request. |

There are additional rules around publishing that each request to this API must respect:

- If the authenticated user is an 'editor' for the publication, they can create posts with any publish status. Posts published as 'public' or 'unlisted' will appear in collection immediately, while posts created as 'draft' will remain in pending state under publication.
- If the authenticated user is a 'writer' for the chosen publication, they can only create a post as a 'draft'. That post will remain in pending state under publication until an editor for the publication approves it.
- If the authenticated user is neither a 'writer' nor an 'editor', they are not allowed to create any posts in a publication.

Possible errors:

| Error code       | Description   |
|------------------|---|
| 400 Bad Request  | Required fields were invalid, not specified.  |
| 401 Unauthorized | The access token is invalid or has been revoked.  |
| 403 Forbidden    | The <code>publicationId</code> in request path doesn't point to a publication that the user can publish into. |

to achieve a look and feel that is only known by desktop applications These web applications are also referred to as Rich Internet Application RIA The user interface is a part of an application the same way its business logic is This requires software engineers to test the user interface to verify its correctness to the same extend they test the rest of the application But testing graphical user interfaces is a tedious task without standardized testing technologies engineers use for business logic verification like unit testing To address this shortcoming research groups applied the concept of model based testing to user interface testing In model based testing an abstraction of the actual graphical user interface is used and test sequences are generated from the model The model as a formal specification can also be checked by a model checker or pose as a test oracle to validate the correctness of the application Ideally such a model or specification can be generated or mined by an automated process This process is usually referred to as specification mining and relieves the test engineer of the task to keep the specification up to date Many tools and approaches have been proposed to target different kinds of applications and properties that the mining tool infers At europe's biggest software company SAP where this thesis was manufactured many RIAs are being developed based on a user interface library called SAPUI5 This library helps developers to create uniform looking RIAs To test their graphical user interface and ensure quality software our approach supports this testing process by using a web crawler known from search engines to automatically infer a specification or model from these interfaces We achieved this by modifying the Ajax capable crawler Crawljax by A Mesbah and using a new more efficient and modular state abstraction based on XPath expressions Our CrawljaxXT also addresses many bugs and shortcomings of the original Crawljax and thus allows for reliable creation of complete user interface models without overly detailed state abstractions Concluding we successfully evaluated our mined models and its testing capabilities with a modified version of the free model based testing tool Graphwalker *Inside Java Workshop 2.0* Lynn Weaver,1998 Completely updated to cover the changes in the latest release of SunSoft's Web Browser based Java WorkShop development environment this book takes readers on a tour of the product teaches them how to use it and imparts strategies for developing successfully with it The CD ROM contains a demo version of JWS and all source code and examples from the book *JavaServer Faces: The Complete Reference* Chris Schalk,Ed Burns,James Holmes,2006-08-25 Ideal for the 3 million Java developers this fast paced tutorial offers in depth coverage of JavaServer Faces JSF Sun Microsystem's Web application architecture for the future Co written by the 1 JSF expert in the Java community this book offers the most complete resource on JSF available Extensive coverage on JSF custom component development Serves as a thorough introduction to AJAX technology and techniques Numerous custom JSF component examples including AJAX enabled components provided **The J2EE Tutorial** Stephanie Bodoff,2004 Discover the ins and outs of the new J2EE 1.4 platform and learn how to build J2EE applications with the latest edition of this tutorial
