Pretschner,2013-03-08 Nuclear ftedicine is not and has not been a purely imaging discipline It is function analysis that has
always been the focal pOint This fact has become particularly obvious in the last few years through the employment of nev
short lived radionuclides new technical procedures and data processing The disadvantage of function analysis in Inclear
ftedicine through the use of radioactively labeled compounds is that more and more complicated and expensive equipment
his to be used A further characteristic is that these machines are stationary and that the patients cannot be examined under
physiological conditions For technical reasons the x camera is developing in the direction of mea suring mainly the so ca led

metabolic functions At present positron cameras are even more e pensive and complicated machines the use of which is very
demanding In this book Priv Doz Dr med Dipl Ing D Peter pretschner has described a new system which contains his ideas
and his technical developments He describes a solution to the urgent questions and dif ficulties in the employment of
