

PURPOSE

To determine if washing your hands with only water will have a similar effect as soap and water. We will also test the effects of cold water vs warm water.

HYPOTHESIS

I think the petri dish testing (soap + warm water) will have less bacteria colonies growing than the petri dish with (no soap + cold water).

I think it is best to wash my hands with (soap + warm water).

However, it will be interesting to see how much (only water) cleans my hands versus (no water & no soap).

COMPARING THE EFFECTS OF BACTERIAL GROWTH WHEN HAND WASHING WITH vs WITHOUT SOAP AND USING WARM vs COLD WATER

ABSTRACT

The purpose of this study was to determine if washing hands with only water will have a similar effect as soap and water. We will also test the effects of cold water vs warm water.

I think using anti-bacterial soap in combination with warm water will kill the most bacteria. I will test this hypothesis by using petri dishes with agar to see how much bacteria grows when my hands are dirty. I will then wash my hands with anti-bacterial soap and using both cold and warm water to see if any of those combinations kill the most bacteria on my hands.

After 5 days of observation and recording the data each day, I have determined that my dirty hands grow the most bacteria. Washing my hands with only water helped prevent a lot of bacteria from growing, but using anti-bacterial soap had the biggest effect in preventing bacterial growth. I did not see much of a difference when using warm water vs cold water in this experiment.

In conclusion, it is better to use anti-bacterial soap and wash your hands with anti-bacterial soap to keep you safe from bad bacteria and germs that will make you sick.

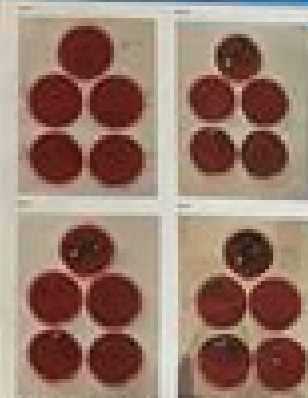

DATA

Materials

5 petri dishes with agar
Antibacterial hand soap
Clean Towel
Cold Water
Warm Water (100°F)
Thermometer
Zoe's Hands
Dirty spots around the house
Handheld floor, dog paws, bottom of shoes, outside concrete
Dark Closet
Camera Phone

RESULTS

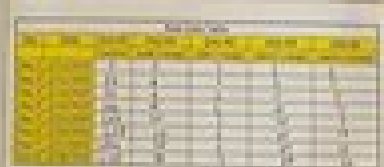

I monitored the bacterial growth for 5 days. As expected, the bacteria grew the **fastest** in the control group using my **DIRTY HANDS**. Washing my hands with **COLD** water cleaned my hands much better than I expected. There was **little** difference between **COLD** and **WARM** water in my experiment. As expected, using **ANTI-BACTERIAL SOAP** slowed the growth of the bacterial growth in petri dish #3 and #5.

CONCLUSION

This experiment taught me that it is very important to wash my hands with **ANTI-BACTERIAL** soap to make sure to remove all the bacteria from my hands. However, if there is no soap available, it is still better to wash my hands with only water than to not wash them at all. Now... **EVERYONE**... go wash your hands to prevent spreading bacteria to your classmates.

ACKNOWLEDGEMENTS

I would like to thank my teacher, Mrs. Kelly, for giving me the opportunity to create my first science project. I learned so much. I would also like to thank my mom, my dad, and my step dad for encouraging me to challenge myself with this project. They were all very supportive in helping me learn how to conduct my first research project. I can now appreciate why my parents tell me to wash my hands before I eat lunch and dinner.
