## Section I: Science Skills - Interpreting Graphs & Equations

You should be familiar with the relationships in the chart below.

This means....

- I. You can identify the graphs from the shape
- II. You can sketch a graph from the equation
- III. You can predict a change in y based on a given change in x.

**Proportional Reasoning:** In AP Physics, graphs and equations are useful because they tell us how two variables are related. You should be able to take a change in one variable and describe how it changes another variable.

Example 1: Newton's Second Law states  $a = \frac{F_{\text{net}}}{m_{\text{sys}}}$ . This equation has three proportions.

Acceleration and  $F_{\text{net}}$  are linearly proportional, and would make a linear graph.

→ Doubling  $F_{\text{net}}$  would double acceleration if mass is constant.

$F_{\text{net}}$  and  $M_{\text{sys}}$  are linearly proportional, and would make a linear graph.

→ Doubling  $F_{\text{net}}$  would double mass if acceleration is constant.

Acceleration and mass are inversely proportional, and would make an inverse graph.

→ Doubling mass would cut acceleration in half if  $F_{\text{net}}$  is constant.

Example 2: The period of a spring is  $T = 2\pi\sqrt{\frac{m}{k}}$ .

T is proportional to the square root of m. This means that if m was doubled, T would change by a factor of  $\sqrt{2}$ . If m was increased by a factor of 4, then T would double. T always changes by the square root of how m is changing.

T is also proportional to  $\frac{1}{\sqrt{k}}$ . This means that if you know how k is changing, you have to take both the inverse and square root of that factor to figure out how T is changing. For example, if k was 9 times bigger, T would be three times smaller ( $\frac{1}{3}$ ).

M and k are directly proportional to each other. If m was doubled and period was to remain the same, the spring constant would also have to be doubled.

*Make sure that everything else in the equation remains constant when using proportional reasoning!*
