

Energy Flow in an Ecosystem

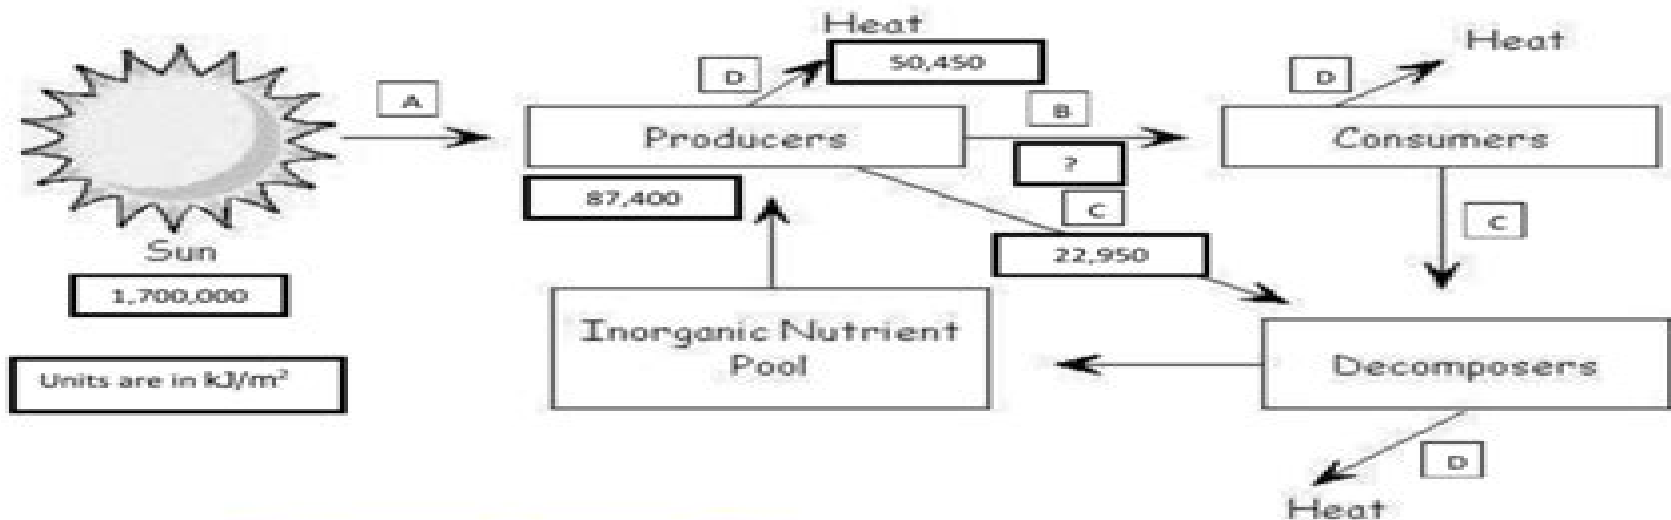

(adapted from Biozone Environmental Science Modular Workbook)

The Laws of Thermodynamics state:

- 1) Energy cannot be created or destroyed but can be converted to another form, and
- 2) As energy conversions occur, some usable energy is "lost" as heat

Therefore, energy stored in the biomass at each trophic level in an ecosystem can be transferred to another trophic level, with some being "lost" as heat energy to the environment. The percentage of energy transferred from one trophic level to the next varies between 5-20% and is called the *ecological efficiency*. The 10% rule of energy transfer is often used. In order to understand energy flow, one must also understand the idea of ecosystem *productivity*.

- Gross Primary Productivity (GPP) – total organic material produced by plants, including that lost as heat due to respiration
- Net Primary Productivity (NPP) – the amount of biomass that is available to consumers at subsequent trophic levels after accounting for that lost as heat

Study the diagram of energy transfer in an ecosystem shown above to answer the questions on the next page.

John Lee,Robert A. Wattenbarger,1996 Gas Reservoir Engineering provides the undergraduate as well as the graduate student

with an introduction to fundamental problem solving in gas reservoir engineering through practical equations and methods. Although much oil well technology applies to gas wells many differences exist. This book helps students understand and recognize these differences to enable appropriate handling of gas reservoir problems. Natural gas production has become increasingly important in the U S and the wellhead revenue generated from it is now greater than the wellhead revenue generated from oil production. Because this trend eventually will be followed worldwide we feel that it is important to emphasize gas reservoir engineering courses at the undergraduate level and to have a textbook devoted to this purpose. This book also serves as an introduction to gas reservoir engineering for graduate students and practicing petroleum engineers. Although much of the technology for oil wells applies to gas wells there are still many differences. It is important to learn these differences and to have a good fundamental background in how to recognize and handle them. We have tried to provide practical equations and methods while emphasizing the fundamentals on which they are based. We have not attempted to be complete in the sense of presenting the best known solutions to all problems in this area of technology. In many cases we didn't even present the problem much less a solution. Instead we concentrated on fundamentals and hope to have made the literature in gas reservoir engineering more accessible both now and in the future. If you don't find your favorite topic in the table of contents or in the index it simply didn't make our short list of fundamentals that we believed to be key parts of the literature.

McGraw-Hill Computing Essentials Timothy J. O'Leary, Linda I. O'Leary, 1995. This text contains all the general information that students need to understand how the hardware of a modern personal computer works. Students are shown how the CPU operates how files are stored how computers are programmed and how they communicate to printers and networks. Ethics and security issues are covered and the book also takes a look at what the future may have in store. Other topics of interest include virtual reality HCI and the Internet.
