

**MARK SCHEME for the May/June 2014 series**

**0625 PHYSICS**

**0625/21**

Paper 2 (Core Theory), maximum raw mark 80

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge will not enter into discussions about these mark schemes.

Cambridge is publishing the mark schemes for the May/June 2014 series for most IGCSE, GCE Advanced Level and Advanced Subsidiary Level components and some Ordinary Level components.

*Nuclear Theory in the Age of Multimessenger Astronomy* Omar Benhar, Alessandro Lovato, Andrea Maselli, Francesco Pannarale, 2024-07-03 Over the last decade astrophysical observations of neutron stars both as isolated and binary sources have paved the way for a deeper understanding of the structure and dynamics of matter beyond nuclear saturation density. The mapping between astrophysical observations and models of dense matter based on microscopic dynamics has been poorly investigated so far. However, the increased accuracy of present and forthcoming observations may be instrumental in resolving the degeneracy between the predictions of different equations of state. Astrophysical and laboratory probes have the potential to paint a new coherent picture of nuclear matter and more generally strong interactions over the widest range of densities occurring in the Universe. This book provides a self-contained account of neutron star properties, microscopic nuclear dynamics, and the recent observational developments in multimessenger astronomy. It also discusses the unprecedented possibilities to shed light on long-standing and fundamental issues such as the validity of the description of matter in terms of pointlike baryons and leptons and the appearance of deconfined quarks in the high-density regime. It will be of interest to researchers and advanced PhD students working in the fields of Astrophysics, Gravitational Physics, Nuclear Physics, and Particle Physics. Key Features: Reviews state-of-the-art theoretical and experimental developments. Self-contained and cross-disciplinary. While being devoted to a very lively and fast-developing field, the book fundamentally addresses methodological issues. Therefore, it will not be subject to fast obsolescence.

**The Collapse of Darwinism** Greg Bredemeier, MD, 2016-03-17 Most people intuitively understand that Darwin's theory of evolution—natural selection acting upon random mutations—is a wholly inadequate theory for the creation of a human being. And most people feel unprepared to debate those scientists, professors, and scholars who use their academic authority to defend Darwinism, often bullying and belittling those of us who dare doubt Darwin. Now Bredemeier identifies and succinctly encapsulates why Darwinism fails. Using anatomy and physiology as only a physician can, Bredemeier exposes the errors and false logic that Darwinian acolytes continue to employ as they protect their mortally wounded theory. Any reader with a high school or college education will become armed with straightforward examples of exactly why Darwinism fails. From anatomy and physiology of the human body, including neuroscience, genetics, embryology, and other fascinating fields of the increasingly numerous biological sciences, Bredemeier provides indisputable and damning evidence for which academicians, scientists, and even Nobel laureates who zealously defend Darwinism have no adequate answer.

Asteroids Martin Elvis, 2021-06-08 A unique wide-ranging examination of asteroid exploration and our future in space. Human travel into space is an enormously expensive and unforgiving endeavor. So why go? In this accessible and authoritative book, astrophysicist Martin Elvis argues that the answer is asteroid exploration for the strong motives of love, fear, and greed. Elvis's personal motivation is one of scientific love: asteroid investigations may teach us about

the composition of the solar system and the origins of life A more compelling reason may be fear of a dinosaur killer sized asteroid hitting our planet Finally Elvis maintains we should consider greed asteroids likely hold vast riches such as large platinum deposits and mining them could provide both a new industry and a funding source for bolder space exploration Elvis explains how each motive can be satisfied and how they help one another From the origins of life to space billiards and space sports Elvis looks at how asteroids may be used in the not so distant future The Future of Christology Dong-Kun

Kim,2019-06-28 The Future of Christology addresses the questions that Christology currently faces and or will face in the future in 12 topics The book consists of two parts In the first part Kim deals with five topics related to traditional Christology while in the second part he wrestles with seven topics related to issues of Christology The twenty first century is a challenging time for Christianity Many in our age are asking what Jesus Christ means in various dimensions of history culture nature and even beyond the Earth Changes in values worldviews and views of the universe are forming a new zeitgeist Dong Kun Kim argues that ways of understanding Christ should change accordingly for a Christology that fails to communicate meaningfully with the times is void of vitality Postmodernism dehistoricization and life post ideology multiculturalism multiple religions and above all the rapid development of the natural sciences pose a serious challenge to traditional Christology Who is Christ in the age of an infinite cosmos How do daily human life social devotion and praxis relate to salvation How can we discuss salvation history in an era post history Where does Christ stand in the public sphere Can the Chalcedonian definition of the two natures of Christ true God and true human being encompass nature and the cosmos would a third nature of Christ be necessary Will the cyborg which may appear in the near future be the object of Christ s salvation If scientific determinism becomes popular in the future will the basis of faith in Christ lose ground If intelligent life exists in the universe what does Christ mean to such life This book provides innovative answers to these questions in an academic context **Putting Ourselves Back in the Equation** George Musser,2023-11-07 This is a delightful account of one of the

deepest and most fascinating explorations going on today at the frontier of our knowledge Carlo Rovelli bestselling author of The Order of Time and Seven Brief Lessons on Physics Musser knows that the point of popular science is to get a sense of what s at stake what kinds of answers are being offered to difficult questions and why it all matters One could not ask more of Putting Ourselves Back in the Equation on all three counts it delivers Julian Baggini The Wall Street Journal A revelatory exploration of how a theory of everything depends upon our understanding of the human mind The whole goal of physics is to explain what we observe For centuries physicists believed that observations yielded faithful representations of what is out there But when they began to study the subatomic realm they found that observation often interferes with what is being observed that the act of seeing changes what we see The same is true of cosmology our view of the universe is inevitably distorted by observation bias And so whether they re studying subatomic particles or galaxies physicists must first explain consciousness and for that they must turn to neuroscientists and philosophers of mind Neuroscientists have painstakingly

built up an understanding of the structure of the brain Could this help physicists understand the levels of self organization they observe in other systems These same physicists meanwhile are trying to explain how particles organize themselves into the objects around us Could their discoveries help explain how neurons produce our conscious experience Exploring these questions and more George Musser tackles the extraordinary interconnections between quantum mechanics cosmology human consciousness and artificial intelligence Combining vivid descriptive writing with portraits of scientists working on the cutting edge Putting Ourselves Back in the Equation shows how theories of everything depend on theories of mind and how they might be one and the same *Meeting of Board of Regents* University of Michigan.
