These free-response practice questions are designed to help you prepare for the free-response section of the AP Chemistry exam. They are based on the most recent AP Chemistry Course Description and reflect the format and content of the actual exam. The free-response section of the exam consists of four questions, each with a maximum of 15 points. You will have 90 minutes to complete the free-response section.

Question 1 **Reaction Mechanism** In a previous question, four reaction mechanisms were proposed for the conversion of  $\text{CH}_3\text{CH}_2\text{Cl}$  to  $\text{CH}_3\text{CH}_2\text{OH}$ . The following reaction mechanism is proposed for the conversion of  $\text{CH}_3\text{CH}_2\text{Cl}$  to  $\text{CH}_3\text{CH}_2\text{OH}$ . The mechanism consists of the following four steps: 1.  $\text{CH}_3\text{CH}_2\text{Cl} \rightarrow \text{CH}_3\text{CH}_2^+ + \text{Cl}^-$  (loss of a chloride ion) 2.  $\text{CH}_3\text{CH}_2^+ + \text{H}_2\text{O} \rightarrow \text{CH}_3\text{CH}_2\text{OH} + \text{H}_3\text{O}^+$  (addition of a water molecule) 3.  $\text{CH}_3\text{CH}_2\text{OH} + \text{H}_3\text{O}^+ \rightarrow \text{CH}_3\text{CH}_2\text{OH} + \text{H}_2\text{O}$  (removal of a proton) 4.  $\text{CH}_3\text{CH}_2\text{OH} + \text{H}_2\text{O} \rightarrow \text{CH}_3\text{CH}_2\text{OH} + \text{H}_3\text{O}^+$  (removal of a proton) The mechanism is proposed to proceed through a series of equilibrium steps, with the final products being  $\text{CH}_3\text{CH}_2\text{OH}$  and  $\text{H}_3\text{O}^+$ .

## 2012 Ap Chemistry Released Exam:

**Alternative Solvents for Green Chemistry** Francesca Kerton, Ray Marriott, 2015-11-09 Everyone is becoming more environmentally conscious and therefore chemical processes are being developed with their environmental burden in mind. This also means that more traditional chemical methods are being replaced with new innovations and this includes new solvents. Solvents are everywhere but how necessary are they? They are used in most areas including synthetic chemistry, analytical chemistry, pharmaceutical production and processing, the food and flavour industry and the materials and coatings sectors. However, the principles of green chemistry guide us to use less of them or to use safer, more environmentally friendly solvents if they are essential. Therefore, we should always ask ourselves: do we really need a solvent? Green chemistry as a relatively new sub discipline is a rapidly growing field of research. Alternative solvents including supercritical fluids and room temperature ionic liquids form a significant portion of research in green chemistry. This is in part due to the hazards of many conventional solvents e.g. toxicity and flammability, and the significant contribution that solvents make to the waste generated in many chemical processes. Solvents are important in analytical chemistry, product purification, extraction and separation technologies, and also in the modification of materials. Therefore, in order to make chemistry more sustainable in these fields, a knowledge of alternative greener solvents is important. This book, which is part of a green chemistry series, uses examples that tie in with the 12 principles of green chemistry e.g. atom efficient reactions in benign solvents and processing of renewable chemicals, materials in green solvents. Readers get an overview of the many different kinds of solvents written in such a way to make the book appropriate to newcomers to the field and prepare them for the green choices available. The book also removes some of the mystique associated with alternative solvent choices and includes information on solvents in different fields of chemistry such as analytical and materials chemistry, in addition to catalysis and synthesis. The latest research developments not covered elsewhere are included, such as switchable solvents and biosolvents. Also, some important areas that are often overlooked are described, such as naturally sourced solvents including ethanol and ethyl lactate and liquid polymers including poly ethyleneglycol and poly dimethylsiloxane. As well as these additional alternative solvents being included, the book takes a more general approach to solvents, not just focusing on the use of solvents in synthetic chemistry. Applications of solvents in areas such as analysis are overviewed, in addition to the more widely recognised uses of alternative solvents in organic synthesis. Unfortunately, as the book shows, there is no universal green solvent and readers must ascertain their best options based on prior chemistry, cost, environmental benefits and other factors. It is important to try and minimize the number of solvent changes in a chemical process and therefore the importance of solvents in product purification, extraction and separation technologies are highlighted. The book is aimed at newcomers to the field, whether research students beginning investigations towards their thesis or industrial researchers curious to find out if an alternative solvent would be suitable in their work.

Field-Coupled Nanocomputing Neal G. Anderson, Sanjukta Bhanja, 2014-05-31

Field coupled nanocomputing FCN paradigms offer fundamentally new approaches to digital information processing that do not utilize transistors or require charge transport. Information transfer and computation are achieved in FCN via local field interactions between nanoscale building blocks that are organized in patterned arrays. Several FCN paradigms are currently under active investigation including quantum dot cellular automata QCA, molecular quantum cellular automata MQCA, nanomagnetic logic NML, and atomic quantum cellular automata AQCA. Each of these paradigms has a number of unique features that make it attractive as a candidate for post CMOS nanocomputing, and each faces critical challenges to realization. This State of the Art Survey provides a snapshot of the current developments and novel research directions in the area of FCN. The book is divided into five sections. The first part Field Coupled Nanocomputing Paradigms provides valuable background information and perspectives on the QDCA, MQCA, NML, and AQCA paradigms and their evolution. The second section Circuits and Architectures addresses a wide variety of current research on FCN clocking strategies, logic synthesis, circuit design, and test logic in memory hardware security and architecture. The third section Modeling and Simulation considers the theoretical modeling and computer simulation of large FCN circuits, as well as the use of simulations for gleaned physical insight into elementary FCN building blocks. The fourth section Irreversibility and Dissipation considers the dissipative consequences of irreversible information loss in FCN circuits, their quantification, and their connection to circuit structure. The fifth section The Road Ahead Opportunities and Challenges includes an edited transcript of the panel discussion that concluded the FCN 13 workshop.
