Directions: Solve each of the following problems, using the available space for scratch work. Decide which is the best of the choices given and fill in the corresponding oval on the answer sheet. No credit will be given for anything written in the test book. Do not spend too much time on any one problem.

1. The statistics below provide a summary of the distribution of heights, in inches, for a simple random sample of 200 young children.

Mean: 46 inches

Median: 45 inches

Standard Deviation: 3 inches

First Quartile: 43 inches

Third Quartile: 48 inches

About 100 children in the sample have heights that are

- (A) less than 43 inches
- (B) less than 48 inches
- (C) between 43 and 48 inches
- (D) between 40 and 52 inches
- (E) more than 46 inches

2. In which of the following situations would it be most difficult to use a census?

- (A) To determine what proportion of licensed bicycles on a university campus have lights
- (B) To determine what proportion of students in a high school support wearing uniforms
- (C) To determine what proportion of registered students enrolled in a college are employed more than 20 hours each week
- (D) To determine what proportion of single-family dwellings in a small town have two-car garages
- (E) To determine what proportion of fish in Lake Michigan are bass

3. The distribution of the diameters of a particular variety of oranges is approximately normal with a standard deviation of 0.3 inch. How does the diameter of an orange at the 67th percentile compare with the mean diameter?

- (A) 0.201 inch below the mean
- (B) 0.132 inch below the mean
- (C) 0.132 inch above the mean
- (D) 0.201 inch above the mean
- (E) 0.440 inch above the mean

Protein Solubility and Aggregation in Bacteria Salvador Ventura,2016-09-26 Proteins suffer many conformational changes and interactions through their life from their synthesis at ribosomes to their controlled degradation Only folded and soluble proteins are functional Thus protein folding and solubility are controlled genetically transcriptionally and at the protein sequence level In addition a well conserved cellular machinery assists the folding of

polypeptides to avoid misfolding and ensure the attainment of soluble and functional structures. When these redundant protective strategies are overcome, misfolded proteins are recruited into aggregates. Recombinant protein production is an essential tool for the biotechnology industry and also supports expanding areas of basic and biomedical research including structural genomics and proteomics. Although bacteria still represent a convenient production system, many recombinant polypeptides produced in prokaryotic hosts undergo irregular or incomplete folding processes that usually result in their accumulation as insoluble aggregates, narrowing thus the spectrum of protein-based drugs that are available in the biotechnology market. In fact, the solubility of bacterially produced proteins is of major concern in production processes and many orthogonal strategies have been exploited to try to increase soluble protein yields. Importantly, contrary to the usual assumption that the bacterial aggregates formed during protein production are totally inactive, the presence of a fraction of molecules in a native-like structure in these assemblies endows them with a certain degree of biological activity, a property that is allowing the use of bacteria as factories to produce new functional materials and catalysts. The protein embedded in intracellular bacterial deposits might display different conformations, but they are usually enriched in beta sheet-rich assemblies resembling the amyloid fibrils characteristic of several human neurodegenerative diseases. This makes bacterial cells simple but biologically relevant model systems to address the mechanisms behind amyloid formation and the cellular impact of protein aggregates. Interestingly, bacteria also exploit the structural principles behind amyloid formation for functional purposes such as adhesion or cytotoxicity. In the present research topic, we collect papers addressing all the issues mentioned above from both the experimental and computational point of view.
