The Skills Balancing Act in Sub-Saharan Africa Omar Arias, David K. Evans, Indhira Santos, 2019-01-31 Despite strong recent economic growth Sub Saharan Africa has levels of economic transformation poverty reduction and skill development far below those of other regions Smart investments in developing skills aligned with the policy goals of productivity growth inclusion and adaptability can help to accelerate the region s economic transformation in the 21st century Sub Saharan Africa s growing working age population presents a major opportunity to increase shared prosperity Countries in the region have invested heavily in building skills public expenditure on education increased sevenfold over the past 30 years and more children are in school today than ever before Yet systems for building skills in this population have fallen short and these shortcomings significantly impede economic prospects In half of the countries fewer than two in every three children complete primary school even fewer reach and complete higher levels of education Learning outcomes have been persistently poor leading to substantial gaps in basic cognitive skills literacy and numeracy among children young people and adults The literacy rate of the adult population is below 50 percent in many countries functional literacy and numeracy rates are even lower Systemwide change is required to achieve significant progress Multiple agencies at the central and local levels are involved in skills development strategies making skills everyone s problem but no one s responsibility Policies and reforms need to build capacity for

evidence based policies and create incentives to align the behaviors of all stakeholders with the pursuit of national skills development goals. The Skills Balancing Act in Sub Saharan Africa: Investing in Skills for Productivity, Inclusivity and Adaptability lays out evidence to inform the policy choices that countries will make in skill investments. Each chapter addresses a set of specific questions drawing on original analysis and synthesis of existing studies to explore key areas. How the skills appropriate to each stage of the life cycle are acquired and what market and institutional failures affect skills formation. What systems are needed for individuals to access these skills including family investments, private sector institutions, schools and other public programs. How those systems can be strengthened. How the most vulnerable individuals, those who fall outside the standard systems and have missed critical building blocks in skills acquisition can be supported. Countries will face trade offs often stark ones that will have distributional impacts and a bearing on their development path. Committed leaders, reform coalitions and well coordinated policies are essential for taking on the skills balancing act in Sub Saharan Africa.

Creativity and Children's Literature Marianne Saccardi, 2014-07-31 Today's students need to be able to do more than score well on tests; they must be creative thinkers and problem solvers. The tools in this book will help teachers and parents start students on the path to becoming innovative, successful individuals in the 21st century workforce. The children in classrooms today will soon become adult members of society; they will need to apply divergent thinking skills to be effective in all aspects of their lives, regardless of their specific occupation. How well your students meet complicated challenges and take advantage of the opportunities before them decades down the road will depend largely upon the kind of thinking they are trained and encouraged to do today. This book provides a game plan for busy librarians and teachers to develop their students' abilities to arrive at new ideas by utilizing children's books at hand. Following an introduction in which the author defines divergent thinking, discusses its characteristics and establishes its vital importance, chapters dedicated to types of literature for children such as fantasy, poetry and non-fiction present specific titles and relevant activities geared to fostering divergent thinking in young minds. Parents will find the recommendations of the kinds of books to read with their children and explanations of how to engage their children in conversations that will help their creative thinking skills extremely beneficial. The book also includes a case study of a fourth grade class that applied the principles of divergent thinking to imagine innovative designs and come up with new ideas while studying a social studies science unit on ecology.
