2012 Ib Chemistry SI Past Paper 1:

High Temperature Corrosion César A. C. Sequeira, 2019-01-23 Reviews the science and engineering of high temperature corrosion and provides guidelines for selecting the best materials for an array of system processes. High temperature corrosion (HTC) is a widespread problem in an array of industries including power generation, aerospace, automotive, and mineral and chemical processing, to name a few. This book provides engineers, physicists, and chemists with a balanced presentation of all relevant basic science and engineering aspects of high temperature corrosion. It covers most HTC types including oxidation, sulfidation, nitridation, molten salts, fuel ash, corrosion, H₂S, H₂, corrosion, molten fluoride, HF, corrosion, and carburization. It also provides corrosion data essential for making the appropriate choices of candidate materials for high temperature service in process conditions. A form of corrosion that does not require the presence of liquids, high temperature corrosion occurs due to the interaction at high temperatures of gases, liquids, or solids with materials. HTC is a subject of increasing importance in many areas of science and engineering, and students, researchers, and engineers need to be aware of the nature of the processes that occur in high temperature materials and equipment in common use today, especially in the chemical, gas, petroleum, electric power, metal manufacturing, automotive, and nuclear industries. Provides engineers and scientists with the essential data needed to make the most informed decisions on materials selection. Includes up-to-date information accompanied by more than 1 000 references, 80% of which from within the past fifteen years. Includes details on systems of critical engineering importance, especially the corrosion induced by low energy radionuclides. Includes practical guidelines for testing and research in HTC along with both the European and International Standards for high temperature corrosion engineering. Offering balanced in-depth coverage of the fundamental science behind and engineering of HTC, *High Temperature Corrosion Fundamentals and Engineering* is a valuable resource for academic researchers, students, and professionals in the material sciences, solid state physics, solid state chemistry, electrochemistry, metallurgy, and mechanical, chemical, and structural engineers.
