2012 Dodge Radio Code:

Theorising Cyber (In)Security Noran Shafik Fouad, 2024-12-02 This book argues that cybersecurity's informational ontology offers empirical challenges and introduces a new interdisciplinary theoretical and conceptual framework of entropic security. Cyber attacks have been growing exponentially in number and sophistication ranging from those conducted by non-state actors to state-backed cyber attacks. Accordingly, cybersecurity now constitutes an integral part of public, private, and academic discourses on contemporary security. Yet because its emergence as a novel security field occurred after many long-established frameworks had already been developed, cybersecurity has been repeatedly scrutinised for its compatibility with conventional security theories, concepts, and understandings, particularly with that of military security. This book, however, argues that cybersecurity differs profoundly from many other security sectors because of the ontological nature of information that sits at the heart of this field. Through this new framework, the book investigates three key empirical challenges in cybersecurity that are co-produced by its informational ontology: 1) the disordered nature of cybersecurity and its tendency towards increasing insecurity as a manifestation of the intrinsic uncertainties in information systems; 2) the unpredictable and unintended consequences resulting from autonomous cyber attacks that challenge human control of cybersecurity environments; and 3) the persistent harms engendered by mundane cyber threats that do not fit within conventional understandings of existentiality in security theories. Through a detailed analysis of cybersecurity discourses and practices in the USA, 2003, the book goes on to show how these complex cybersecurity challenges are better analysed and theorised through the new information theoretic notion of entropic security. This book will be of much interest to students of cyber security, critical security studies, science and technology studies, and International Relations in general.

Global Action for School Libraries Barbara Schultz-Jones, Dianne Oberg, 2022-10-03 This book focuses on inquiry-based teaching, one of the five vital aspects of the instructional work of school librarians identified in the second edition of the IFLA School Library Guidelines 2015. Effective implementation of inquiry-based teaching and learning requires a consistent instructional approach based on a model of inquiry that is built upon foundations of research and best practice. The book explains the importance and significance of inquiry as a process of learning, outlines the research underpinning this process of learning, describes ways in which models of inquiry have been developed, provides recommendations for implementing the use of such models, and demonstrates how the other core instructional activities of school librarians, such as literacy and reading promotion, media and information literacy instruction, technology integration, and professional development of teachers, can be integrated into inquiry. Inquiry-based learning is part of learning to be a learner, a lifelong pursuit involving finding and using information. Inquiry develops the skills and understandings that learners need in new information environments, whether that be as students in post-secondary institutions, as producers and creators in workplaces, or as citizens in communities. Through inquiry-based teaching, school librarians help students to build the essential skills and

understandings needed for dealing with complex learning challenges including analysis critical thinking and problem solving In this book special attention is given to the development of students metacognitive abilities which are essential to their becoming life long and life wide learners The Internet City Aharon Kellerman,2019 Exploring the history of the Internet from pre conception to the possibilities of an Internet based future The Internet City presents ways in which the Internet and urban life intersect The book interprets how the contemporary city is becoming fully based on Internet technologies in all of its major dimensions the daily activities of urbanites and urban companies the operations of urban systems and the functioning of the upcoming driverless vehicles Radio Amateur Callbook Magazine ,1938 QST. ,1956
