Safety and Security Review for the Process Industries Dennis P. Nolan, 2011-10-28 Dennis P. Nolan [Pacific Coast Joint Chapter Meeting](#) American Petroleum Institute. Pacific Coast Chapter. Joint Meeting, 1980 [Applications of HAZOP and What-If Safety Reviews to the Petroleum, Petrochemical and Chemical Industries](#) Dennis P. Nolan, 1994-12-31

This publication is intended to provide guidance to HAZOP Hazard and Operability and What If review teams associated with the petroleum petrochemical and chemical industries. It describes the nature responsibilities methods and documentation required in the performance of such reviews. This ensures the reviews are conducted in a timely effective and professional manner as may be prescribed by a company's Process Safety Management PSM Policy. This book can be used as a practical reference to prepare the safety review requirements for these industries and their process safety management systems. The safety of petroleum and chemical facilities is an important part of a company's operations. Recent worldwide petrochemical safety regulations and a company's own process safety management policies would require that a process hazard analysis PHA review of its existing and proposed petroleum operations be accomplished. The limits of hazardous substances cited by both the US Occupational Safety and Health Administration OSHA and the Environmental Protection Agency EPA regulations dictate the applications of process safety management elements at almost all of a company's facilities. These reviews are intended to reduce the probability and or consequences of a major incident that would have a detrimental impact to the employees the public's well being onsite or offsite properties the environment and most important to a company itself its continued business operation and survival. Process hazard analysis reviews are not intended to identify the minor slips trips or falls these are the responsibility of the company's general safety requirements and are well established. The process hazard analysis is looking for the major incidents which have the potential for severe impacts. HAZOP and What If reviews are two of the most common petroleum and chemical industries qualitative methods used to conduct process hazard analyses. Up to 80% of a company's process hazard analyses may consist of HAZOP and What If reviews with the remainder 20% from checklist Fault Tree Analysis Event Tree Failure Mode and Effects Analysis etc. An experienced review team can use the analysis to generate possible deviations from design construction modification and operating intent that define potential consequences. These consequences can then be prevented and or mitigated by the application of the appropriate safeguards.
