Morgan, 2012-09-17 During the last two centuries the way economic science is done has changed radically it has become a social science based on mathematical models in place of words This book describes and analyses that change both historically and philosophically using a series of case studies to illuminate the nature and the implications of these changes It is not a technical book it is written for the intelligent person who wants to understand how economics works from the inside out This book will be of interest to economists and science studies scholars historians sociologists and philosophers of science But it also aims at a wider readership in the public intellectual sphere building on the current interest in all things economic and on the recent failure of the so called economic model which has shaped our beliefs and the world we live in **Science Education for Elementary Teachers** Ann Benbow, Colin Mably, 2002 This book reflects its authors many years of experience in elementary school teaching pre service and in service education in science and substantial work in science curriculum development It is derived from informed by

and directly linked to both the Benchmarks for Science Literacy and the National Research Council's National Science Education Standards. No other methods book integrates standards to this degree. Written with the idea that students learn science by doing, this well-respected author team focus on the constructivist approach and the integrating of science with other elementary academic subjects.

Modern Scientific Evidence, 2006 **The Natural Sciences and the Social Sciences** I. Bernard Cohen, 1994

Natural Sciences and the Social Sciences contains a series of explorations of the different ways in which the social sciences have interacted with the natural sciences. Usually such interactions are considered to go only one way from the natural to the social sciences. But there are several important essays in this volume which show how developments in the social sciences have affected the natural sciences even the hard science of physics. Other essays deal with various types of interaction since the Scientific Revolution. In his general introductory chapter, Cohen sets some general themes concerning analogies and homologies and the use of metaphors, drawing specific examples from the use of concepts of physics by marginalist economists and of developments in the life sciences by organismic sociologists. The remaining chapters, which explore the different ways in which the social sciences and the natural sciences have actually interacted, are written by leaders in the field of history of science drawn from a wide range of countries and disciplines. The book will be of great interest to all historians of science, philosophers interested in questions of methodology, economists and sociologists and all social scientists concerned with the history of their subject and its foundations.
