

1. Use a crane as a support for the outer frame or apron. Move the outer frame or apron into the approximate position for installation on the scissor arm assembly.

CAUTION

Do not let the load bearings or shims fall off the scissor arms.

2. Make sure the shims and load bearings are installed in the correct positions on the scissor arms. If necessary, use tape to keep the load bearings on the scissor arms. Do not let the load bearings fall during installation of the outer frame or apron.

CAUTION

Do NOT operate the lift or side-shift functions if the side-shift frame has been removed. Hydraulic oil can come out of the hoses.

NOTE: Another installation method for the outer frame or apron, is to raise the scissor arms and inner frame as a unit. Operate the lift system of the lift truck to raise the scissor arms and inner frame above the outer frame or apron. Use the crane and a bar to align the channels of the outer frame or apron under the load bearings of the scissor arms. Tilt the outer frame or apron forward for clearance. Have another person slowly lower the scissor assembly so that the load bearings are in the channels. Tilt the outer frame or apron back to align the scissor arms to install the pins.

NOTE: Use safety chains on the inner frame and mast weldments to keep the inner frame and mast weldments from moving. Install the safety chains as described in **SAFETY PROCEDURES** in the section **VENTA MANT Reparo, 8000 SRH 882**.

WARNING

There are pinch points on the reach carriage that can cause an injury. Use clamps and blocks to prevent the scissor arms from moving. Install the clamps and blocks at the channels of the inner frame to make sure that the load bearings cannot move in the channel. See **FIGURE 5**.

3. Use the crane to move the outer frame or apron for alignment with the scissor arms. Tip the outer frame or apron forward and align the channels with the load bearings of the scissor arms. Slowly lift the outer frame or apron to install the load bearings in the channels.

NOTE: Another removal method for the outer frame or apron, is to raise the scissor arms and inner frame as a unit. Remove the safety chains and operate the lift system of the lift truck to raise the scissor arms and inner frame off the outer frame or apron.

4. The load bearings must move in the channels and have minimum clearance with free movement. Keep the outer frame or apron in vertical alignment and move it up and down on the load bearings. If necessary, add or remove shims for free movement and minimum clearance. Each shim set must have the same thickness.

5. Install new bushings in the top end of each scissor arm. Lubricate the bushings with multi-purpose grease. Tip the outer frame or apron back and align the holes for the mount pins with the bushings in the top scissor arms.

6. Keep the pins (Item 3, **FIGURE 6**; Item 4, **FIGURE 7**) in alignment to install the roll pins. Install the pins and roll pins.

7. If the side-shift frame is not installed, install it on the apron as described in **Installation Of Side-Shift Frame**.

8. Install the boxes at the top of the outer or side-shift frame as marked during removal. For units without side-shift, see **FIGURE 7**. For units with side-shift, see **FIGURE 6**.

9. After all hydraulic lines are connected, operate the functions to check for leaks and correct operation. Remove the air from the system as described in **CHECKS AND ADJUSTMENTS** at the end of this section. Install new cable ties at the original locations for clearance of hoses and electrical cables during operation.

10. If necessary, install the forks and load backrest extension as described in **FORK REPLACEMENT AND LOAD BACKREST EXTENSION REMOVAL AND INSTALLATION**.

SCISSOR ARMS – SINGLE-REACH

Removal And Disassembly Of Scissor Arms – Single-Reach (See **FIGURE 8**, and **FIGURE 13**.)

NOTE: Make sure that the forks are in the fully retracted position.
