## How Light Travels

Light travels in a straight line.

### Reflection

Light is reflected when it bounces off an object.

Example: Light hitting a mirror.

### Refraction

Refraction is the bending of light.

Example: A spoon appears to bend when placed in a glass of water.

## Light Energy

Light transfers a major energy. Energy from the sun is transferred to Earth by light. As the light is absorbed, it warms the Earth and assists in the process of photosynthesis.

### The Solar System

Technology can be used to transform light energy into other forms of energy. For example, solar panels turn radiant or light energy into electrical energy.

## Terms to Know

- Electromagnetic Energy:** Energy that travels in waves.
- Visible Light:** Electromagnetic energy that can be seen by the human eye.
- Frequency:** The number of waves passing a given point in a given amount of time.

## Transverse Waves

Light travels in waves called transverse waves. The highest part of a wave is called the crest and the lowest part of a wave is called the trough.

Light waves are described by their wavelength. A wavelength is the distance between two points that follow each other. For example, the distance between one crest to the next crest OR the distance between one trough to the next trough.

## Frequency & Energy

The greater the frequency, the greater the amount of energy.

Wave A has more energy than Wave B because Wave A has a greater frequency.

## The Visible Spectrum

Visible light is only a small portion of the electromagnetic spectrum. All other light is invisible.

Review

Write the colors green, blue, and yellow. Put with the shortest wavelength to the energy being transformed into a

should have a greater frequency than a has more energy and explain why.

appear flat when it is setting?
