Trends in Teaching Experimentation in the Life Sciences Nancy J. Pelaez, Stephanie M. Gardner, Trevor R. Anderson, 2022-05-11 This book is a guide for educators on how to develop and evaluate evidence based strategies for teaching biological experimentation to thereby improve existing and develop new curricula. It unveils the flawed assumptions made at the classroom, department and institutional level about what students are learning and what help they might need to develop competence in biological experimentation. Specific case studies illustrate a comprehensive list of key scientific competencies that unpack what it means to be a competent experimental life scientist. It includes explicit evidence based guidelines for educators regarding the teaching, learning and assessment of biological research competencies. The book also provides practical teacher guides and exemplars of assignments and assessments. It contains a complete analysis of the variety of tools developed thus far to assess learning in this domain. This book contributes to the growth of public understanding of biological issues including scientific literacy and the crucial importance of evidence based decision making around public policy. Choosing Selection Stephen G. Brush, 2009-01-01 Describes the hypothesis that Darwin's natural selection reformulated by R. A. Fisher, J. B. S. Haldane and S. Wright in the light of Mendelian genetics is the exclusive mechanism for biological evolution. During the 1930s alternatives such as Lamarckism, macromutations and orthogenesis were rejected in favor of natural selection acting on small mutations but there were disagreements about the role of random genetic drift in evolution. By the 1950s research by T. Dobzhansky, E. B. Ford and others persuaded leading evolutionists that natural selection was so powerful that drift was unimportant. This conclusion was accepted by most however some biology textbooks and popular articles mentioned drift in the late 1960s.
