

More about Earth's atmosphere

The atmosphere consists of five layers. The troposphere is the layer closest to Earth, and the fifth and highest layer of the atmosphere is the exosphere.

Exosphere 600-10,000 km (above sea level)

This layer ends where the Earth's gravity is too weak to prevent gas particles from drifting into space. The exobase is the boundary between the exosphere and thermosphere, and its altitude changes based on the thermosphere's size.

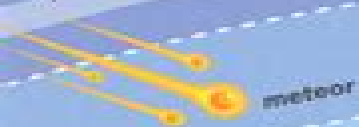

Thermosphere 85-600 km

The International Space Station and China's Tiangong Space Station orbit Earth in the thermosphere. The Karman Line, which marks the boundary between Earth and outer space, is located here.

Mesosphere 50-85 km

Most space debris and meteors burn up at this level before reaching Earth's surface.

Stratosphere 10-50 km

Located in the stratosphere, the ozone layer blocks much of the sun's radiation.

Troposphere 0-10 km

Most of Earth's weather, including the wind and most clouds, exists in this layer.
