

When the engine is running, the "START" warning light will come on. If the engine does not start after 10 seconds of cranking, press down the accelerator pedal to 1/2 in. to be moved while cranking. Release the key and accelerator pedal when the engine starts.

CORNERING LIGHTS

The optional front cornering lights operate in conjunction with the main lights when the turn signal is operating in either direction, and the headlights are on. When the cornering lights are on, the corresponding cornering light switch is also on.

STARTING THE GASOLINE ENGINE

For an optional diesel engine, see "Starting the Diesel Engine" section. For vehicles sold in Canada which do NOT have the Computer Command Control system, please refer to the "Canadian Owner's Manual" supplied with your vehicle for engine starting procedures. If the "START" light comes on during engine starting, your vehicle does not have the Computer Command Control System.

1. Apply the parking brake.
2. Move the transmission shift lever to "P" (Park) or "N" (Neutral) (if manual). A safety device is designed to keep the starter from operating if the shift lever is in any drive position. (If you need to restart the engine while the vehicle is moving, move the shift lever to "N".)
3. Turn the ignition key to "START" in the following instructions conditions.

NOTE: Do not crank the engine for more than about 10 seconds at a time. Wait 10 seconds before trying again. This will help prevent damage to the starter.

COLD ENGINE

1. All Engines — Press the accelerator pedal to the floor and crank about 1/2. With your foot off the pedal, crank the engine by turning the ignition key to "Start." Release the key when the engine starts.

If the engine starts, but fails to run, repeat this procedure. When the engine is running smoothly (about 30 seconds), you can reduce the engine idle speed by pressing down on the accelerator pedal, then slowly releasing it.

NOTE: If the engine runs for a long time (5 minutes or more) without pressing down the accelerator pedal, overheating could occur damage to the engine and other parts.

Do not leave your vehicle unattended with the engine running. If the engine should stall, you would not be able to start the "START" warning light on your instrument panel. This could result in costly damage to your vehicle and its contents.

WARM ENGINE

1. All Engines — Do not press down the accelerator pedal. With your foot off the pedal, crank the engine by turning the ignition key to "Start." If the engine does not start after 10 seconds of cranking, press down the accelerator pedal to 1/2 in. to be moved while cranking. Release the key and accelerator pedal when the engine starts.

2. Very Cold Weather (Below -10°C or 50°F) — After vehicle has been standing idle several days: Before cranking the engine, fully depress and release the accelerator pedal one or two times more than usual for your engine under "Cold Engine" starting. Then, with your foot off the accelerator pedal, crank the engine by turning the ignition key to "Start." Release the key when the engine starts.

3. Apply the regular brakes and shift into the proper gear. Release the parking brake and drive off.

Engine Fails To Start After Normal Starting Procedure

1. If you tried the cold engine starting procedure and the engine did not start, then fully depress and release the accelerator pedal several times. Turn your foot off the pedal and crank the engine by turning the key to "Start."
2. If you tried the warm engine starting procedure (or the cold engine procedure and that 1. above), and the engine still does not start, press the accelerator pedal to the floor and hold it there while cranking the engine. This should clear the engine if it is flooded.
3. If the engine has been flooded with too much fuel, it may start to run but not have enough power to keep running. In that case, continue cranking with the accelerator pedal all the way to the floor until the engine clears itself of excess gasoline and runs smoothly. (But, do not crank more than 10 seconds at a time or you could damage the starter.)

DRIVING THROUGH WATER (DIESEL ENGINES)

NOTE: Do not drive through standing water more than 6 inches deep if your vehicle has a diesel engine. If you do, or if you drive through standing water faster than 6 mph (10 km/h), water can be sucked into the engine through the air intake. This can result in immediate and extensive engine damage.

STARTING THE DIESEL ENGINE

If you use the following procedure, you should have no trouble starting your diesel engine. Please note that a diesel engine starts differently than a gasoline engine.

1. Apply the parking brake.
2. Automatic Transmissions: Shift the transmission shift lever to "P" (Park) or "N" (Neutral) ("P" preferred). A safety device is designed to keep the starter from operating if the shift lever is in any drive position. (If you need to re-start the engine while the vehicle is moving, move the shift lever to "N".)
3. Turn the ignition key to "RUN." DO NOT TURN IT TO "START." With the ignition in "RUN," the "WAIT" light will come on. This tells you that
