Physical Activity and Learning After School Paula J. Schwanenflugel, Phillip D. Tomporowski, 2017-12-13 Subject Areas Keywords academic enrichment programs academic skills after school activities after school programs children elementary schools exercise games health promotion high poverty schools interventions kinesiology literacy mathematics obesity prevention physical education physical fitness public health reading social studies struggling learners students DESCRIPTION Every school day more than 10 million children attend after Abacus Yr6/P7: Numeracy Support Book Ruth Merttens, David Kirkby, 2001-02-19 Aimed at pupils who are struggling with basic number work this book is divided into maths skills Each section provides alternative teaching strategies and practical techniques Straightforward practical activities are suitable for a individual or group work *On the Development of Space-Number Relations: Linguistic and Cognitive Determinants, Influences, and Associations* Hans-Christoph Nuerk, Krzysztof Cipora, Frank Domahs, Maciej Haman, 2020-03-30 **Linguistic Influences on Mathematical Cognition** Ann Dowker, Hans-Christoph Nuerk, 2017-06-16

For many years an abstract amodal semantic magnitude representation largely independent of verbal linguistic representations has been viewed as the core numerical or mathematical representation This assumption has been substantially challenged in recent years Linguistic properties affect not only verbal representations of numbers but also numerical magnitude representation spatial magnitude representations calculation parity representation place value representation and even early number acquisition Thus we postulate that numerical and arithmetic processing are not fully independent of linguistic processing This is not to say that in patients magnitude processing cannot function independently of linguistic processing we just suppose these functions are connected in the functioning brain So far much research about linguistic influences on numerical cognition has simply demonstrated that language influences number without investigating the level at which a particular language influence operates After an overview we present new findings on language influences on seven language levels Conceptual Conceptual properties of language Syntactic The grammatical structure of languages beyond the word level influences Semantic The semantic meaning or existence of words Lexical The lexical composition of words in particular number words Visuo spatial orthographic Orthographic properties such as the writing reading direction of a language Phonological Phonological phonetic properties of languages Other language related skills Verbal working memory and other cognitive skills related to language representations We hope that this book provides a new and structured overview on the exciting influences of linguistic processing on numerical cognition at almost all levels of language processing
