## Anfis Matlab Tutorial:

*Evolving Connectionist Systems* Nikola Kasabov, 2013-03-14 Many methods and models have been proposed for solving difficult problems such as prediction planning and knowledge discovery in application areas such as bioinformatics speech and image analysis. Most however are designed to deal with static processes which will not change over time. Some processes such as speech, biological information and brain signals are not static however and in these cases different models need to be used which can trace and adapt to the changes in the processes in an incremental on line mode and often in real time. This book presents generic computational models and techniques that can be used for the development of evolving adaptive modelling systems. The models and techniques used are connectionist based as the evolving brain is a highly suitable paradigm and where possible existing connectionist models have been used and extended. The first part of the book covers methods and techniques and the second focuses on applications in bioinformatics, brain study, speech, image and multimodal systems. It also includes an extensive bibliography and an extended glossary. *Evolving Connectionist Systems* is aimed at anyone who is interested in developing adaptive models and systems to solve challenging real world problems in computing science or engineering. It will also be of interest to researchers and students in life sciences who are interested in finding out how information science and intelligent information processing methods can be applied to their domains.

**Evolving Connectionist Systems** Nikola K. Kasabov, 2007-08-23 This second edition of the must read work in the field presents generic computational models and techniques that can be used for the development of evolving adaptive modeling systems as well as new trends including computational neuro genetic modeling and quantum information processing related to evolving systems. New applications such as autonomous robots, adaptive artificial life systems and adaptive decision support systems are also covered.

**International Conference on Education and Management Science (ICEMS2014)**, 2014-09-24 2014 International Conference on Education and Management Science ICEMS2014 will be held in Beijing, China on August 19-20, 2014. The main purpose of this conference is to provide a common forum for researchers, scientists and students from all over the world to present their recent findings, ideas, developments and application in the border areas of Education and Management Science. It will also report progress and development of methodologies, technologies, planning and implementation tools and standards in information systems. Education is an internal topic. It is a process of delivering knowledge in a basic meaning. Humans are hard to define the actual definition of education. But it is the key point for our society to step forward. Management science is the discipline that adapts the scientific approach for problem solving to help managers making informed decisions. The goal of management science is to recommend the course of action that is expected to yield the best outcome with what is available.
