with a special emphasis on smart manufacturing and information management systems It covers sensors machine vision systems collaborative technologies industrial robotics digital twins and virtual and mixed reality Further topics include quality management supply chain agile manufacturing lean management and sustainable transportation Chapters report on theoretical research and experimental studies concerning engineering design simulation and various machining processes for subtractive and additive manufacturing It also discusses key aspects related to engineering education and competence management in the Industry 4.0 era Based on the 7th International Conference on Design Simulation Manufacturing The Innovation Exchange DSMIE 2024 held on June 4-7 2024 in Pilsen Czech Republic this first volume of a 2 volume set provides academics and professionals with extensive information on technologies trends challenges and practice oriented experience in all the above mentioned areas

Introduction to AI Techniques for Renewable Energy System Suman Lata Tripathi, Mithilesh Kumar Dubey, Vinay Rishiwal, Sanjeevikumar Padmanaban, 2021-11-25 Introduction to AI techniques for Renewable Energy System Artificial Intelligence AI techniques play an essential role in modeling analysis and prediction of the performance and control of renewable energy The algorithms used to model control or predict performances of the energy systems are complicated involving differential equations enormous computing power and time requirements Instead of complex rules and mathematical routines AI techniques can learn critical information patterns within a multidimensional information domain Design control and operation of renewable energy systems require a long term series of meteorological data such as solar radiation temperature or wind data Such long term measurements are often non-existent for most of the interest locations or wherever they are available they suffer from several shortcomings like inferior quality of data and insufficient long series The book focuses on AI techniques to overcome these problems It summarizes commonly used AI methodologies in renewable energy with a particular emphasis on neural networks fuzzy logic and genetic algorithms It outlines selected AI applications for renewable energy In particular it discusses methods using the AI approach for prediction and modeling of solar radiation seizing performances and controls of the solar photovoltaic PV systems Features Focuses on a significant area of concern to develop a foundation for the implementation of renewable energy system with intelligent techniques Showcases how researchers working on renewable energy systems can correlate their work with intelligent and machine learning approaches Highlights international standards for intelligent renewable energy systems design reliability and maintenance Provides insights on solar cell biofuels wind and other renewable energy systems design and characterization including the equipment for smart energy systems This book which includes real life examples is aimed at undergraduate and graduate students and academicians studying AI techniques used in renewable energy systems
