[MariaDB with Java GUI for Cryptography and Image Processing](#) Vivian Siahaan, Rismon Hasiholan, Sianipar, 2019-09-02
This book is Java MariaDB version of our previous books which used Java MySQL and Java PostgreSQL. In this book you will learn how to build from scratch a criminal records management database system and simple bank database system using Java MariaDB. All Java code for digital image processing in this book is Native Java. Intentionally not to rely on external libraries so that readers know in detail the process of extracting digital images from scratch in Java. There are only three external libraries used in this book: Connector J to facilitate Java to MariaDB connections, JCalendar to display calendar controls and JFreeChart to display graphics. Digital image techniques to extract image features used in this book are: grascaling, sharpening, inverting, blurring, dilation, erosion, closing, opening, vertical, prewitt, horizontal, prewitt, Laplacian, horizontal, sobel and vertical, sobel. For readers you can develop it to store other advanced image features based on descriptors such as SIFT and others for developing descriptor based matching. In the first chapter you will learn the basics of cryptography using Java. Here you will learn how to write a Java program to count Hash MAC Message Authentication Code, store keys in a KeyStore, generate PrivateKey and PublicKey, encrypt, decrypt data and generate and verify digital prints. In the second chapter you will learn how to create and store salt passwords and verify them. You will create a Login table. In this case you will see how to create a Java GUI using NetBeans to implement it. In addition to the Login table in this chapter you will also create a Client table. In the case of the Client table you will learn how to generate and save public and private keys into a database. You will also learn how to encrypt, decrypt data and save the results into a database. In the third chapter you

will create an Account table. This account table has the following ten fields: account_id (primary key), client_id (primary key), account_number, account_date, account_type, plain_balance, cipher_balance, decipher_balance, digital_signature, and signature_verification. In this case, you will learn how to implement generating and verifying digital prints and storing the results into a database. In the fourth chapter, you will create a table with the name of the Account, which has ten columns: account_id (primary key), client_id (primary key), account_number, account_date, account_type, plain_balance, cipher_balance, decipher_balance, digital_signature, and signature_verification. In the fifth chapter, you will create a Client_Data table, which has the following seven fields: client_data_id (primary key), account_id (primary key), birth_date, address, mother_name, telephone, and photo_path. In the sixth chapter, you will be taught to create Java GUI to view, edit, insert, and delete Suspect table data. This table has eleven columns: suspect_id (primary key), suspect_name, birth_date, case_date, report_date, suspect_status, arrest_date, mother_name, address, telephone, and photo. In the seventh chapter, you will be taught how to create Crime database and its tables. In the ninth chapter, you will be taught how to extract image features utilizing BufferedImage class in Java GUI. In the eighth chapter, you will be taught to create Java GUI to view, edit, insert, and delete Feature_Extraction table data. This table has eight columns: feature_id (primary key), suspect_id (foreign key), feature1, feature2, feature3, feature4, feature5, and feature6. All six fields except keys will have a BLOB data type so that the image of the feature will be directly saved into this table. In the ninth chapter, you will add two tables: Police_Station and Investigator. These two tables will later be joined to the Suspect table through another table: File_Case, which will be built in the seventh chapter. The Police_Station has six columns: police_station_id (primary key), location, city, province, telephone, and photo. The Investigator has eight columns: investigator_id (primary key), investigator_name, rank, birth_date, gender, address, telephone, and photo. Here, you will design a Java GUI to display, edit, fill, and delete data in both tables. In the eleventh chapter, you will add two tables: Victim and File_Case. The File_Case table will connect four other tables: Suspect, Police_Station, Investigator, and Victim. The Victim table has nine columns: victim_id (primary key), victim_name, crime_type, birth_date, crime_date, gender, address, telephone, and photo. The File_Case has seven columns: file_case_id (primary key), suspect_id (foreign key), police_station_id (foreign key), investigator_id (foreign key), victim_id (foreign key), status, and description. Here, you will also design a Java GUI to display, edit, fill, and delete data in both tables. Finally, this book is hopefully useful for you.

Java Coding with Android Programming 4 Donggeun Jung, 2019-01-03

What is this textbook? This is a lecture on coding and creating apps and games that can be installed and run on Android phones. This is a lecture that will be helpful to everyone from performance evaluation of middle school and high school students to job seekers who want to become a professional programmer. You can study the theory, practice, and development of your apps at the same time and have fun coding. You can also create your own apps and install them on your phone. Why should I learn coding? The purpose of learning coding is to improve the ability to think logically. Making a command to a computer is a lot different from talking to a person. Because the computer can understand only computer

programming language Do ordinary people who do not care about coding have to learn coding Talking to a computer is a lot of patience but if you have exactly delivered the command it will be done People make mistakes but computers do not make mistakes The Alpha Go's movement which looked like a mistake in the match with Lee Sedol in March 2016 was actually a thoroughly calculated strategy In this sense it is helpful for ordinary people to learn coding to live their life So how do I study to learn coding No matter what kind of discipline practice is important Knowing only coding theory does not help you to grow your logic Repeatedly doing many exercises will improve your ability to think The human brain is similar to muscles Muscle should continue exercise to develop further When weighing in a gym muscles grow and astronauts who travel on a car have less muscle Likewise if you want to develop your brain you should do a lot of thinking exercises That is why theories should be learned at a minimum and lots of practice are better If you make many examples in this manual you can understand what the coding grammar means You can naturally improve your logic while making various examples Is not coding useful in real life just educational It is worth studying just to improve the logic but it would be better if it helps the real life Currently the most common tool for coding is scratch This textbook is a little different In this tutorial you will develop various Android apps by Java language You can study coding create your own apps and install them on your smartphone Also if you want to become a programmer like the author you can learn the real IT techniques Should studying be boring and difficult There are a lot of people who think that study hard makes good memory I do not mean to say wrong but if I study it I think learning to have fun makes feel easy and concentration is higher Maybe you have heard this sentence A genius can not follow a hard worker and a hard worker can not follow who enjoy his work This tutorial will help you learn coding and smartphone application development by making simple games and apps Why do I have to learn the Java language among various computer languages Among many computer languages the C series takes up 50 percent of the market C C C and Java are C series languages That's why learning the Java language is like learning C and C Scratch or Python is easy to learn but after learning an easy language you may feel difficult to learn other languages The C series language is difficult to learn at first but after you get used to it you can easily learn other languages I don't know anything about coding Is it difficult to develop an Android application I made this book even beginners can study alone and develop smartphone apps As you read and practice making sample apps through the textbook you will find yourself becoming an expert **Interface Age** ,1982 **Learning Android Intents** Muhammad Usama Bin Aftab,Wajahat Karim,2014 The book will take an easy-to-follow and engaging tutorial approach providing a practical and comprehensive way to learn Android intents If you are a novice or an intermediate Android Developer who wants to expand their knowledge of Android Intents this book is ideal for you Readers are expected to have basic understanding of Android development how to use different IDEs and how to develop applications using Android APIs **Android Application Development All-in-One For Dummies** Barry Burd,John Paul Mueller,2020-08-04 Conquer the world of Android app development Android has taken over the mobile and TV markets and become unstoppable
