*Helping Your Child Learn Math* Patsy F. Kanter, Linda B. Darby, 1999      *Developing Math Talent* Susan Goodsell, Assouline, Ann Lupkowski-Shoplik, 2005 Build student success in math with the only comprehensive parent and teacher guide for developing math talent among advanced learners. More than just a guidebook for educators and parents, this book offers a comprehensive approach to mathematics education for gifted students in elementary and middle school. All Levels      *Source Book of Projects*, 1981      **The Game of School** Robert Lee Tripp, 1993 THE GAME OF SCHOOL a new book that provides a radical insider's critique of the American public high school today plus suggestions for meaningful change within the school system as it is a proposal for a radically new school system. American schools do not need more hours of school every day, more days of school every year with schools as they now are training students to memorize information to be spit back on tests thus laying the ground work for the pretense, boredom, cynicism that are central elements in the destructive game that is the norm. The need schools that actively meaningfully engage students in the process of their own learning where the atmosphere is constructive not destructive where there is a connection between academic pursuit and the world outside for which school is supposed to prepare students. This book is unique because it is written by a regular long haul teacher because the perceptions of students are quoted throughout because it provides meaningful answers. The author, Robert Tripp, was a high school social studies teacher, a Fulbright teacher in England, ran a graduate teacher program, was a Human Relations specialist for a major school system, a 30 year career. *Resources in Education*, 1989      *Bad at Math?* Lidia Gonzalez, 2023-02-03 Math really is for everyone so let's prove it. You've heard it from kids, from friends, and from celebrities: I'm bad at math. It's a line that society tends to accept without examination after all, some people just aren't math people, right? Wrong. As we do with other essential skills, we need to expose the stereotypes, challenge the negative mindsets, and finally confront the systemic opportunity gaps in math education and replace them with a new vision for what math is, who it's for, and who can excel at it. In this book, you'll find research on teacher and student mindsets and their effect on student achievement, audience-specific and differentiated tools, reflection questions, and suggested actions for educators at all levels of the system. Examples from popular media as well as personal

stories and anecdotes Quotes data driven figures and suggestions for deeper learning on all aspects of a positive and equitable vision of math education Both social commentary and a toolkit of solutions this bold new book directly challenges the constructs that have historically dictated our perceptions of what makes someone a math person Only by dismantling those misplaced assumptions can we reform math education so it works for everyone Because in truth we are all math people
