State Standards

Content Concepts: Chromosomes allow for the storage and transmission of genetic information. There are a set of instructions encoded in the nucleotide sequence of each organism. Chromosomes encode the specific instructions within that complete the processes characteristic to that organism.

1.1 Describe how basic structures (nucleus, nuclear membrane, nucleolus, DNA and RNA, chromosomes, centromeres, telomeres) and DNA, and describe the function in genetic inheritance.

1.2 Explain how mutations in the DNA sequence of a gene may or may not result in phenotypic change in an organism. Explain how mutations in genes may result in phenotypic changes in offspring.

1.3 Describe how inheritance patterns caused by several types of genetic traits (dominant, recessive, co-dominant, semi-lethal, polygenic, incomplete, multiple alleles).

1.4 Describe how Mendel's Law of Segregation and Independent assortment can be observed through genetics and inheritance (e.g., Shirley bird crosses).

1.5 Use a Punnett Square to determine the probabilities for genotype and phenotype combinations in monohybrid crosses.

11 Introduction To Genetics Study Guide Key:

Pediatric Critical Care Study Guide Steven E. Lucking, Frank A. Maffei, Robert F. Tamburro, Neal J. Thomas, 2012-04-10 This is the first comprehensive study guide covering all aspects of pediatric critical care medicine. It fills a void that exists in learning resources currently available to pediatric critical care practitioners. The major textbooks are excellent references but do not allow concise reading on specific topics and are not intended to act as both text and study guide. There are also several handbooks available but these are usually written for general pediatric residents and lack the advanced physiology and pathophysiology required for the higher level pediatric critical care practitioner.
