2013 September Physical Sciences Pmemo:

Convergence National Research Council, Division on Earth and Life Studies, Board on Life Sciences, Committee on Key Challenge Areas for Convergence and Health, 2014-06-16 Convergence of the life sciences with fields including physical, chemical, mathematical, computational, engineering and social sciences is a key strategy to tackle complex challenges and achieve new and innovative solutions. However, institutions face a lack of guidance on how to establish effective programs, what challenges they are likely to encounter and what strategies other organizations have used to address the issues that arise. This advice is needed to harness the excitement generated by the concept of convergence and channel it into the policies, structures and networks that will enable it to realize its goals. Convergence investigates examples of organizations that have established mechanisms to support convergent research. This report discusses details of current programs, how organizations have chosen to measure success and what has worked and not worked in varied settings. The report summarizes the lessons learned and provides organizations with strategies to tackle practical needs and implementation challenges in areas such as infrastructure, student education and training, faculty advancement and inter-institutional partnerships.

Crime, Violence, and Global Warming John Crank, Linda Jacoby, 2015-05-20 Crime, Violence and Global Warming introduces the many connections between climate change and criminal activity. Conflict over natural resources can escalate to state and non-state actors, resulting in wars, asymmetrical warfare and terrorism. Crank and Jacoby apply criminological theory to each aspect of this complicated web, helping readers to evaluate conflicting claims about global warming and to analyze evidence of the current and potential impact of climate change on conflict and crime. Beginning with an overview of the science of global warming, the authors move on to the links between climate change, scarce resources and crime. Their approach takes in the full scope of causes and consequences, present and future, in the United States and throughout the world. The book concludes by looking ahead at the problem of forecasting future security implications if global warming continues or accelerates. This fresh approach to the criminology of climate change challenges readers to examine all sides of this controversial question and to formulate their own analysis of our planet's future.

A History of Scientific Journals Aileen Fyfe, Noah Moxham, Julie McDougall-Waters, Camilla Mørk Røstvik, 2022-10-03 Modern scientific research has changed so much since Isaac Newton's day, it is more professional, collaborative and international, with more complicated equipment and a more diverse community of researchers. Yet the use of scientific journals to report, share and store results is a thread that runs through the history of science from Newton's day to ours. Scientific journals are now central to academic research and careers. Their editorial and peer review processes act as a check on new claims and findings, and researchers build their careers on the list of journal articles they have published. The journal that reported Newton's optical experiments still exists. First published in 1665 and now fully digital, the *Philosophical Transactions* has carried papers by Charles Darwin, Dorothy Hodgkin and Stephen Hawking. It is now one of eleven journals published by the Royal Society of London. Unrivalled

insights from the Royal Society's comprehensive archives have enabled the authors to investigate more than 350 years of scientific journal publishing. The editorial management, business practices and financial difficulties of the *Philosophical Transactions* and its sibling *Proceedings* reveal the meaning and purpose of journals in a changing scientific community. At a time when we are surrounded by calls to reform the academic publishing system it has never been more urgent that we understand its history.

Indigenous Peoples' Governance of Land and Protected Territories in the Arctic Thora Martina Herrmann, Thibault Martin, 2015-12-22 This book addresses critical questions and analyses key issues regarding Indigenous Aboriginal Peoples and governance of land and protected areas in the Arctic. It brings together contributions from scientists, indigenous and non-indigenous researchers, local leaders and members of the policy community that document Indigenous Aboriginal approaches to governance of land and protected areas at the local, regional and international level. It explores new territorial governance models that are emerging as part of the Indigenous Aboriginal governance within Arctic States, provinces, territories and regions. It analyses the recognition or lack thereof concerning indigenous rights to self-determination in the Arctic and examines how traditional decision-making arrangements and practices can be linked with governments in the process of good governance. The book highlights essential lessons learned, success stories and remaining issues, all of which are useful to address issues of Arctic governance of land and protected areas today and which could also be relevant for future governance arrangements.

UCLA Stuart House Replacement Project, 2013 [Triennial Review of the National Nanotechnology Initiative](#) National Research Council, Division on Engineering and Physical Sciences, National Materials and Manufacturing Board, Committee on Triennial Review of the National Nanotechnology Initiative: Phase II, 2014-01-20

The National Nanotechnology Initiative (NNI) is a multi-agency, multidisciplinary federal initiative comprising a collection of research programs and other activities funded by the participating agencies and linked by the vision of a future in which the ability to understand and control matter at the nanoscale leads to a revolution in technology and industry that benefits society. As first stated in the 2004 NNI strategic plan, the participating agencies intend to make progress in realizing that vision by working toward four goals: Planning, coordination and management of the NNI are carried out by the interagency Nanoscale Science, Engineering and Technology (NSET) Subcommittee of the National Science and Technology Council (NSTC) Committee on Technology (CoT), with support from the National Nanotechnology Coordination Office (NNCO). The Triennial Review of the National Nanotechnology Initiative is the latest National Research Council review of the NNI, an assessment called for by the 21st Century Nanotechnology Research and Development Act of 2003. The overall objective of the review is to make recommendations to the NSET Subcommittee and the NNCO that will improve the NNI's value for basic and applied research and for development of applications in nanotechnology that will provide economic, societal and national security benefits to the United States. In its assessment, the committee found it important to understand in some detail and to describe in its report the NNI's structure and organization, how the NNI fits within the larger federal research

enterprise as well as how it can and should be organized for management purposes and the initiative's various stakeholders and their roles with respect to research. Because technology transfer one of the four NNI goals is dependent on management and coordination the committee chose to address the topic of technology transfer last following its discussion of definitions of success and metrics for assessing progress toward achieving the four goals and management and coordination. Addressing its tasks in this order would the committee hoped better reflect the logic of its approach to review of the NNI Triennial Review of the National Nanotechnology Initiative also provides concluding remarks in the last chapter **Report to the Governor and General Assembly** Illinois. Department of Children and Family Services. Office of Inspector General, 2017 Progress in Physics, 2014

The Budget of the United States Government United States, 2014 **Sustainability in the Gulf** Elie Azar, Mohamed Abdel Raouf, 2017-07-31 Sustainability is a topic of great interest today particularly for the Gulf Cooperation Council (GCC) countries which have witnessed very rapid economic and demographic growth over the past decade. The observed growth has led to unsustainable consumption patterns of vital resources such as water, energy and food highlighting the need for an urgent shift towards green growth and sustainable development strategies. Sustainability in the Gulf covers the region's contemporary development challenges through the lens of the UN's Sustainable Development Goals (SDGs) which place sustainability at the centre of the solution to the current environmental, economic and social imbalances facing GCC countries. The book presents multiple analyses of Gulf specific sustainability topics examining the current status, challenges and opportunities as well as identifying key lessons learned. Innovative and practical policy recommendations are provided as well as new conceptual angles to the evolving academic debates on the post oil era in the Gulf. Through chapters covering sector related studies as well as the socio economic dimensions of the sustainability paradigm this volume offers valuable insights into current research efforts made by the GCC states proposing a way forward based on lessons learned. This is a valuable resource for students, academics and researchers in the areas of Environmental Studies, Political Economy and Economics of the GCC states.
