Engineering Emergence Larry B. Rainey, Mo Jamshidi, 2018-09-03 This book examines the nature of emergence in context of man made i e engineered systems in general and system of systems engineering applications specifically It investigates emergence to interrogate or explore the domain space from a modeling and simulation perspective to facilitate understanding detection classification prediction control and visualization of the phenomenon Written by leading international experts the text is the first to address emergence from an engineering perspective System engineering has a long and proud tradition of establishing the integrative view of systems The field however has not always embraced and assimilated well the lessons and implications from research on complex adaptive systems As the editors note there have been no texts on Engineering Emergence Principles and Applications It is therefore especially useful to have this new edited book that pulls together so many of the key elements ranging from the theoretical to the practical and tapping into advances in methods tools and ways to study system complexity Drs Rainey and Jamshidi are to be congratulated both for their vision of the book and their success in recruiting contributors with so much to say Most notable however is that this is a book with engineering at its core It uses modeling and simulation as the language in which to express principles and insights in ways that include tight thinking and rigor despite dealing with notably untidy and often surprising phenomena Paul K Davis RAND and Frederick S Pardee RAND Graduate School The first chapter is an introduction and overview to the text The book provides 12 chapters

that have a theoretical foundation for this subject Includes 7 specific example chapters of how various modeling and simulation paradigms techniques can be used to investigate emergence in an engineering context to facilitate understanding detection classification prediction control and visualization of emergent behavior The final chapter offers lessons learned and the proposed way ahead for this discipline

4D Hyperlocal Lucy Bullivant, 2017-03-13 4D Hyperlocal A Cultural Tool Kit for the Open source City The evolution of digital tools is revolutionising urban design planning and community engagement This is enabling a new hyperlocal mode of design made possible by geolocation technologies and GPS enabled mobile devices that support connectivity through open source applications Real time analysis of environments and individuals input and feedback bring a new immediacy and responsiveness Established linear design methods are being replaced by adaptable mapping processes real time data streams and experiential means fostering more dynamic spatial analysis and public feedback This shifts the

emphasis in urban design from the creation of objects and spaces to collaboration with users and from centralised to distributed participatory systems Hyperlocal tools foster dynamic relational spatial analysis making their deployment in urban and rural contexts challenged by transformation particularly significant How can hyperlocal methods solutions including enterprise driven uses of technology for bioclimatic design and contexts influence each other and support the evolution of participatory architectural design What issues for example arise from using real time data to test scenarios and shape environments through 3D digital visualisation and simulation methods What are the advantages of using GIS with its integrative and visualising capacities and relational flexible definition of scale with GPS for multi scalar mapping
