for choke and surge optimisation the geometry variation of the optimised diffuser is different in the stable central area for both speed lines the geometry change is consistent Therefore the diffuser can be made to work best for both half and full load engine operation As a result the optimum diffuser geometry impacts engine efficiency and the overall performance of a typical passenger car for real drive cycles increasing power and slightly improving thermal efficiency When a typical car engine is running at full and half load in real world operation the improved compressor efficiency is expected to make a small difference This will make the engine more powerful and more efficient by about 0.1% **Comprehensive Medicinal**
