*The Module & Programme Development Handbook* Jennifer A. Moon, 2002 Modular course structures are now the norm in higher education. This book provides a step by step handbook on the processes involved in the design of modules and programmes showing how to successfully develop courses that meet quality assessment and other key criteria. A comprehensive, concise and refreshingly straightforward guide, this book is a unique practical resource covering the entire process of developing a module. It gives a clear overview of various elements and enables readers to develop successful structures for their own students. The handbook stresses the importance of design.

**A Faculty and Staff Guide to Creating Learning Outcomes** Jimmie Gahagan, John Dingfelder, Katharine Pei, 2010-05-17 Published in partnership with the Office of Student Engagement University of South Carolina For more than a decade, educators have focused on illustrating the effectiveness of educational interventions by measuring changes in grade point averages, retention, satisfaction and participation. What such measures don't tell us is what students know or are able to do as a result of their educational experiences. Yet this is the kind of data colleges and universities are increasingly asked to report by state legislatures, regional accrediting agencies and a number of other stakeholders. Responding to this call requires new assessment vehicles that report success through the eyes of students using measurable learning outcomes for courses, programs of study and cocurricular experiences. A Faculty and Staff Guide to Creating Learning Outcomes presents a framework for developing and assessing student learning outcomes in a brief, accessible format.

*A Practical Guide to Assessing English Language Learners* Christine Anne Coombe, Keith S. Folse, Nancy J. Hubley, 2007 For many teachers of English language learners, the field of assessment is foreign territory. Assessment has its own culture, traditions and terminology. This training guide is intended to help classroom teachers become more comfortable creating and using assessments. A Practical Guide to Assessing English Language Learners provides helpful insights into the practice and terminology of assessment. The text focuses on providing the cornerstones of good assessments: usefulness, validity, reliability, practicality, washback, authenticity, transparency and security and techniques for testing. It devotes a chapter to the assessment of each of the four main skill areas: reading, writing, listening and speaking, and also covers placement testing such as using TOEFL and MELAB, diagnostic testing, evaluation and instructional decision making with regard to testing. Tips to improve students' test-taking strategies are offered and each chapter ends with a helpful list of Ten Things to Remember as well as informative case studies featuring two teachers and their assessment decisions. Incorporating its own principles, A Practical Guide to Assessing English Language Learners opens with a short quiz for the reader called Are You Testwise that quickly determines how each teacher will benefit from this indispensable guide.

**Developing Assessments for the Next Generation Science Standards** National Research Council,Division of Behavioral and Social Sciences and Education,Board on Science Education,Board on Testing and Assessment,Committee on Developing Assessments of Science Proficiency in K-12,2014-05-29 Assessments understood as tools for tracking what and how well students have learned play a critical role in the classroom Developing Assessments for the Next Generation Science Standards develops an approach to science assessment to meet the vision of science education for the future as it has been elaborated in A Framework for K 12 Science Education Framework and Next Generation Science Standards NGSS These documents are brand new and the changes they call for are barely under way but the new assessments will be needed as soon as states and districts begin the process of implementing the NGSS and changing their approach to science education The new Framework and the NGSS are designed to guide educators in significantly altering

the way K 12 science is taught The Framework is aimed at making science education more closely resemble the way scientists actually work and think and making instruction reflect research on learning that demonstrates the importance of building coherent understandings over time It structures science education around three dimensions the practices through which scientists and engineers do their work the key crosscutting concepts that cut across disciplines and the core ideas of the disciplines and argues that they should be interwoven in every aspect of science education building in sophistication as students progress through grades K 12 Developing Assessments for the Next Generation Science Standards recommends strategies for developing assessments that yield valid measures of student proficiency in science as described in the new Framework This report reviews recent and current work in science assessment to determine which aspects of the Framework's vision can be assessed with available techniques and what additional research and development will be needed to support an assessment system that fully meets that vision The report offers a systems approach to science assessment in which a range of assessment strategies are designed to answer different kinds of questions with appropriate degrees of specificity and provide results that complement one another Developing Assessments for the Next Generation Science Standards makes the case that a science assessment system that meets the Framework's vision should consist of assessments designed to support classroom instruction assessments designed to monitor science learning on a broader scale and indicators designed to track opportunity to learn New standards for science education make clear that new modes of assessment designed to measure the integrated learning they promote are essential The recommendations of this report will be key to making sure that the dramatic changes in curriculum and instruction signaled by Framework and the NGSS reduce inequities in science education and raise the level of science education for all students

**Measurement and Assessment in Education** Cecil R. Reynolds, Ronald B. Livingston, Victor L. Willson, 2006 This text employs a somewhat traditional approach to the study of educational tests and measurement so that teachers will understand essential psychometric concepts and be able to apply them in the classroom The principles that guide the development of this text are 1 What essential knowledge and skills do classroom teachers need to conduct student assessments in a professional manner and 2 What does the research on educational assessment tell us This focus has resulted in a uniquely approachable but technically accurate presentation of the material While providing a slightly more technical presentation of the material than more basic texts this text is both approachable and comprehensive The text includes a gentle introduction to the basic mathematics of measurement and expands traditional coverage to include a thorough discussion of performance and portfolio assessments a complete presentation of assessment accommodations for students with disabilities and a practical discussion of professional best practices in educational measurement
