Installation

NOTE: Clean all metal component in a top-quality metal cleaner. Use Loctite thread guard remover (P/N 413 700 000, or suitable equivalent). To remove remaining Loctite 5910 on the contact surface, use a copper brush.

WARNING

Wear safety glasses and work in a well-ventilated area when working with strong chemical products. Also wear suitable non-absorbent gloves to protect your hands.

For installation, reverse the removal procedure. However, pay attention to the following.

Use the silicone-based Loctite 5910 (P/N 260 000 001) on mating surfaces.

IMPORTANT: When beginning the application of the sealant, the assembly and the first torquing should be done within 10 minutes. It is suggested to have all you need on hand to save time.

Use a corrugated plate and apply some sealant on it. Use a soft rubber roller (50 x 25 mm (2 x 1 in) available at auto products suppliers for pneumatic) and roll the sealant to get a thin uniform coat on the plate (spread as necessary). When ready, apply the sealant on magneto mating surfaces.

NOTE: It is recommended to apply this specific system as described here to get an uniform application without brush. If you do not use the roller method, you may use your finger to uniformly distribute the sealant (using a finger will not affect the adhesion).

Apply Loctite 5910 all around the magneto cover all surface except the areas described below.

NOTE: Do not apply it excess as it will spread out inside cover.

CAUTION: Apply the product only in the shown areas.
