we chose mathematica because of its huge suite of mathematical functions that can be implemented by simple one line commands for its symbolic computational power and for the large number of other texts that can be used by a student to gain proficiency in the language and to glean ideas for metabolic modelling

models of real cellular systems can become extremely complicated when constructed in this way for example the model of the red blood cell described in chapter 7 contains 60 state variables metabolites and 270 parameters such systems are often said to be overparameterized with respect to the available experimental data
