**Man-Machine-Environment System Engineering** Shengzhao Long, Balbir S. Dhillon, 2017-08-21 These proceedings showcase the best papers selected from more than 500 submissions introducing readers to the top research topics and the latest developmental trends in the theory and application of Man Machine Environment System Engineering (MMESE). This research topic was first established in China by Professor Shengzhao Long in 1981 with direct support from one of the greatest modern Chinese scientists, Xuesen Qian. In a letter to Shengzhao Long from October 22nd, 1993, Xuesen Qian wrote: "You have created a very important modern science and technology in China." MMESE primarily focuses on the relationship between Man, Machine, and Environment, studying the optimum combination of related Man, Machine, Environment systems. In this paradigm, Man refers to working people as the subject at the workplace, e.g. operators, decision makers. Machine is the general name for any object controlled by Man, including tools, machinery, computers, systems, and technologies. Environment describes the specific working conditions under which Man and Machine interact, e.g.

temperature noise vibration hazardous gases etc In turn the three goals of optimization are to ensure safety efficiency and economy in this context These proceedings present interdisciplinary studies on the concepts and methods of physiology psychology system engineering computer science environmental science management education and other related disciplines They offer a valuable resource for all researchers and professionals whose work involves interdisciplinary areas touching on MMESE subjects *Scientific and Technical Aerospace Reports* ,1990 *Aviation Week & Space Technology* ,1990
