

Activity 1: 10/10/2025

Reading: read the first two sections on genetic variation in *peromyscus polionotus* (part of the following questions) and understand the first understanding of the concepts discussed in the lecture.

1. Explain each of the following changes in *peromyscus polionotus* (part of the following questions):

☒ A. Cystic

☐ B. Displacement

☐ C. Expansion

☐ D. Translocation

☐ E. as function of a chromosome is changed

☐ F. as position of chromosome is changed

☐ G. as length of chromosome is changed (chromosome expansion, contraction, deletion, duplication, translocation, inversion)

☐ H. as position of a chromosome is changed (chromosome expansion, contraction, deletion, duplication, translocation, inversion)

2. How many genetically different gametes can be produced from a diploid cell with four chromosomes (pairs)? Explain your answer.

Answer: The number of genetically different gametes that can be produced is equal to 2^n , where n is the number of chromosomes. In this case, $n = 4$, so the number of genetically different gametes that can be produced is $2^4 = 16$.

3. Although you will learn in lecture that the four chromosomes (pairs) are genetically different, how many of the four chromosomes are genetically different? Explain your answer.

Answer: The four chromosomes are genetically different. The four chromosomes are: 1. Chromosome 1 (the largest chromosome), 2. Chromosome 2 (the second largest chromosome), 3. Chromosome 3 (the third largest chromosome), and 4. Chromosome 4 (the smallest chromosome). The four chromosomes are genetically different because they contain different genes and are inherited from different parents.

4. Describe the alignment of chromosomes during prophase I, and the separation.

Answer: During prophase I, the four chromosomes (pairs) are aligned in a row. The four chromosomes are: 1. Chromosome 1 (the largest chromosome), 2. Chromosome 2 (the second largest chromosome), 3. Chromosome 3 (the third largest chromosome), and 4. Chromosome 4 (the smallest chromosome). The four chromosomes are aligned in a row because they are all inherited from the same parent.

5. How many genetically different gametes can be produced from a diploid cell with four chromosomes (pairs)? Explain your answer.
