*Cardiovascular Genetics and Genomics for the Cardiologist* Victor J. Dzau, MD, Choong-Chin Liew, PhD, 2008-04-15 Until recently a modest knowledge of genetics

was more than adequate for the daily practice of clinical cardiology but advances in genetics and genomics are changing cardiovascular medicine in fundamental ways The identification of the genetic basis of several forms of dyslipidemia

hypertension diabetes cardiomyopathies and vascular diseases signalled the new importance of genetics in clinical medicine In this timely volume Drs Dzau and Liew both pioneers in the area help cardiologists understand how cardiovascular genetics

may remodel the way cardiovascular medicine is practiced what material has immediate relevance to the practicing clinician how to incorporate genetics and genomics in your practice to ensure up to date patient care The book opens with

introductory chapters then discusses cardiovascular single gene disorders cardiovascular polygenic disorders therapies and applications Outstanding contributors write on their areas of expertise making *Cardiovascular Genetics and Genomics for the Cardiologist* both authoritative and comprehensive If you want to gain a better appreciation of how genetics and genomics

are already shaping current practice and may potentially revolutionize cardiology look no further than this dependable reference

*Variation of Leptin-Melanocortin Signaling Pathway Genes and their Genetic Effects on Body Weight, Linear Body Measurements and Fatness Traits in Sheep* Shishay Girmay Endallew, 2023-08-23 Doctoral Thesis Dissertation from the year 2019 in the subject Biology Genetics Gene Technology grade Very good language English abstract This thesis focuses on examining the genetic effects of leptin melanocortin signaling pathway genes specifically MC4R STAT3

and LEP on body measurement and fatness traits in sheep. The study recognizes that an animal's phenotype performance for a specific trait is influenced by both its genetic merit and the environmental factors it experiences. To improve genetic traits in sheep, it is crucial to define the genetic component associated with the trait of interest. The research identifies major genes within the leptin-melanocortin signaling pathway that significantly impact growth and lean meat production. The study utilizes various techniques such as bioinformatics tools, Polymerase Chain Reaction (PCR), direct sequencing, General Linear Models (GLM), immunohistochemistry (IHC), and promoter region analysis to investigate the variations, structure, function, and expression of these genes in different tissues of sheep. While studies have begun to gain insight into chromosomal locations that regulate economically valuable traits in sheep, much unearthing remains to be done regarding the generation of practical genomics information that can be applied to genetic improvement of reproduction, disease resistance, production, and carcass quality traits in sheep. Although preceding researchers have reported SNPs in the major genes of the leptin-melanocortin signaling pathway, including the MC4R and LEP, has reported an association with various economically important traits in sheep. The effect of the STAT3 genotypes on body weight and fatness in sheep is not determined. Moreover, the association of variants in the promoter region of the MC4R gene with the economically important traits and the promoter region of the gene was not delineated. So this study was crucial to enlighten these research gaps.
