**Psychology and Mathematics Education** Gila Hanna,Laura Macchi,Karin Binder,Laura Martignon,Katharina Loibl,2023-09-05 Modern Mathematics is constructed rigorously through proofs based on truths which are either axioms or previously proven theorems Thus it is par excellence a model of rational inquiry Links between Cognitive Psychology and Mathematics Education have been particularly strong during the last decades Indeed the Enlightenment view of the rational human mind that reasons makes decisions and solves problems based on logic and probabilities was shaken during the second half of the twentieth century Cognitive psychologists discovered that humans thoughts and actions often deviate from rules imposed by strict normative

theories of inference. Yet these deviations should not be called errors as Cognitive Psychologists have demonstrated these deviations may be either valid heuristics that succeed in the environments in which humans have evolved or biases that are caused by a lack of adaptation to abstract information formats. Humans as the cognitive psychologist and economist Herbert Simon claimed do not usually optimize but rather suffice even when solving problems. This Research Topic aims at demonstrating that these insights have had a decisive impact on Mathematics Education. We want to stress that we are concerned with the view of bounded rationality that is different from the one espoused by the heuristics and biases program. In Simon's bounded rationality and its direct descendant ecological rationality, rationality is understood in terms of cognitive success in the world correspondence rather than in terms of conformity to content free norms of coherence e.g. transitivity.

**Forthcoming Books** Rose Arny, 1997-12     **Raising Awe-Seekers** Deborah Farmer Kris, 2025-05-27 A truly inspiring book for parents and caregivers and for the kid inside us all. What if helping boost kids' mental and emotional well-being, strengthen their social ties and support their curiosity and internal motivation were as simple as rediscovering awe? Through research interviews and personal stories, Deborah Farmer Kris explores how awe and wonder can and should be a part of every childhood and how becoming an awe seeker can change your life and your parenting in profound and concrete ways. Plenty of parenting resources speak directly to the concerns facing children and teens, including intense pressure to achieve, how to navigate social media and the online world, struggles with focus and motivation, spiking rates of anxiety and disordered eating, and worries about climate change, political strife, global crises and local injustices. Rather than focusing on the challenges or telling you how to raise kids, this book, structured around seven of the most common sources of awe identified by Dacher Keltner and other awe researchers, aims to reconnect you with something fundamentally human: the capacity to wonder. With the curiosity of a reporter and the heart of a parent and with plenty of humor and honesty, Farmer

Kris breaks down the science of awe connecting the research to what we know about how kids learn and grow and anchoring it with four of her personal parenting tenets that dovetail with awe seeking Slow down childhood Embrace playtime downtime and family time Practice radical curiosity Become an awe seeker yourself In these pages you ll hear from experts and read stories and observations from the author s experiences as a parent and educator of two decades Words from other parents and from young people themselves round out the chapters and underline the importance of bending kids worlds toward wonder You ll also find concrete strategies and resources from activities to booklists to help you take what you ve learned apply it to your parenting and share your wonder with your children **Congressional Record** United States.
