**Making Presentation Math Computable** André Greiner-Petter, 2022-12-31 This Open Access book addresses the issue of translating mathematical expressions from LaTeX to the syntax of Computer Algebra Systems CAS Over the past decades especially in the domain of Sciences Technology Engineering and Mathematics STEM LaTeX has become the de facto standard to typeset mathematical formulae in publications Since scientists are generally required to publish their work LaTeX has become an integral part of today s publishing workflow On the other hand modern research increasingly relies on CAS to simplify manipulate compute and visualize mathematics However existing LaTeX import functions in CAS are limited to simple arithmetic expressions and are therefore insufficient for most use cases Consequently the workflow of experimenting and publishing in the Sciences often includes time consuming and error prone manual conversions between presentational LaTeX and computational CAS formats To address the lack of a reliable and comprehensive translation tool between LaTeX and CAS this thesis makes the following three contributions First it provides an approach to semantically enhance LaTeX expressions with sufficient semantic information for translations into CAS syntaxes Second it demonstrates the first context aware LaTeX to CAS translation framework LaCAST Third the thesis provides a novel approach to evaluate the performance for LaTeX to CAS translations on large scaled datasets with an automatic verification of equations in digital mathematical libraries This is an open access book

*Transforming Public Education* Stacey Childress, 2010 Transforming Public Education features nineteen cases that profile entrepreneurs who are pursuing opportunities to create pattern breaking social change in our public schools For nearly two decades education entrepreneurs have been working to transform the K 12 public education system in the United States

Social entrepreneurship has become part of the language of a new generation of idealists many of whom are focused on education. The nineteen cases in this book profile entrepreneurs who are pursuing opportunities to create pattern breaking social change in our public schools in particular by creating high quality educational opportunities for low income and minority students who are dramatically underserved by the current public education system. Based on a popular course developed and taught at the Harvard Business School this casebook is organized into four modules: Understanding the Context of Urban Schooling in the United States; Tackling the People Problem; Focusing on Performance; Launching and Growing New Schools. Students are invited to explore four overarching questions: Why are there opportunities for entrepreneurs in a sector that is funded with public dollars and delivered by public agencies? Why is entrepreneurial activity aggregating around certain opportunities? What are the possibilities and constraints faced by entrepreneurs in each opportunity area? How can we evaluate the impact of these entrepreneurs' efforts?

**Moving From What to What If?** John Barell, 2016-03-02 This practical book outlines how you can challenge students to grapple with complex problems and engage more meaningfully with information across the content areas rather than rely solely on rote memorization and standardized testing to measure academic success. Author John Barell shares vignettes from effective middle and high school teachers around the country, analyzes what works and what doesn't when encouraging students to dig deeper, and offers practical strategies that you can try in your own classroom. Topics include: Guiding students to hone their skills in abstract reasoning, inquiry, creative problem solving, and critical thinking; Designing your lessons and units for authentic achievement to prepare students for success in their future careers and academic pursuits; Using rigorous benchmark assessments to analyze students' progress in meaningful ways; and Encouraging students to set learning goals and drive their own achievement. Aligned with the Common Core and other standards, this book will help you teach students to become inquisitive, engaged citizens who wonder about the universe, stretch their imaginations, and solve problems by asking "What If?"

**State Indicators of Science and Mathematics Education**, 1990 *Technology's Edge* Lisa Barrow, Lisa Markman, Cecilia Elena Rouse, 2008 We present results from a randomized study of a well defined use of computers in schools: a popular instructional computer program for pre algebra and algebra. We assess the program using a test designed to target pre algebra and algebra skills. Students randomly assigned to computer aided instruction score 0.17 of a standard deviation higher on pre algebra algebra tests than students randomly assigned to traditional instruction. We hypothesize that the effectiveness arises from increased individualized instruction as the effects appear larger for students in larger classes and in classes with high student absentee rates.
