## Answer Key

### SECTION 1. THE LINNAEAN SYSTEM OF CLASSIFICATION

- organisms or species
- physical similarities
- taxa
- organisms or species
- binomial nomenclature
- a scientific name or two-part Latin name
- In a hierarchy, each level is nested, or included, in the level above it.
- From kingdom to species, the taxa become more and more specific, broad to specific. Seven taxa: a. kingdom; b. phylum; c. class; d. order; e. family; f. genus; g. species
- The technology at the time did not allow Linnaeus to examine organisms at the molecular or genetic level.
- Unrelated species can evolve similar traits through convergent evolution.
- These types of similarities are more likely the result of species sharing a common ancestor than are physical similarities.
- naming, classifying
- Latin
- genus, species

### SECTION 2. CLASSIFICATION BASED ON EVOLUTIONARY RELATIONSHIPS

- the evolutionary history for a group of species
- in a branching-tree diagram, such as a cladogram
- to place species on a branching-tree diagram in the order in which they descended from a common ancestor
- taxon being classified
- clade
- node
- derived characters
- a group of organisms that shares a common ancestor
- Scientists must determine which derived characters are shared by which groups of organisms; the more derived characters a

group of organisms has, the later it descended from the common ancestor.

- A node is a place where a branch splits. It represents the most common ancestor shared by a clade.
- DNA sequences/genes, amino acid sequences/proteins, hormones, etc.
- As more research is done and the evolutionary histories of different species become better understood, evolutionary trees are rearranged to reflect the most current scientific understanding.
- The species are very closely related; they share a relatively recent common ancestor.
- A phylogeny shows the origins for a group, or "class," of species.
- Cladistics is classification based on evolutionary relationships and a cladogram shows these relationships in a branching-tree diagram.
- derived

### SECTION 4. DOMAINS AND KINGDOMS

- Since it reflects the most current understanding of how living things are related, new discoveries can change the way living things are classified.
- Three hundred years ago, only two kingdoms were recognized. Now, a six-kingdom system is most widely accepted.
- His research revealed two genetically different groups of prokaryotes, which justified splitting kingdom Monera into two kingdoms. The genetic and cellular differences were so great, that these two kingdoms were eventually placed into different domains in the current three-domain system.

#### Timeline:

1735: Linnaeus introduced his two-kingdom system which included Plantae and Animalia; 1866: Kingdom Protista introduced by Haeckel; 1938: Kingdom Monera introduced by Copeland; 1959:

Syndrome. Clinical Conference,1996-04-16 A guide for practitioners scientists and patients Clinical Management of Chronic Fatigue Syndrome provides an insightful overview of current clinical management of CFS and guidelines for dealing with the disease and its compounding issues It also provides especially for patients an objective framework in which they can approach the confusing psychological and physical ramifications of the disease so that they may sort through possibly misleading information on current treatments CFS has been the focus of an increasing number of research investigators seeking to unravel the enigmatic interrelationship of immunologic neurologic endocrinologic and psychologic abnormalities associated with this debilitating disorder Because many practical issues have been underestimated by the medical

community and considerable misinformation exists regarding the appropriate evaluation and management of the CFS patient the American Association for Chronic Fatigue Syndrome AACFS held its first clinical conference to address this problem the results of which are presented in this book Each chapter based on material presented at the October 1994 conference has been completely updated and revised during a peer review process making Clinical Management of Chronic Fatigue Syndrome a useful and up to date guide for practitioners and scientists as well as patients Despite the potential of nervous system functional assessments the diagnosis of CFS continues to be a major problem because a consensus diagnostic tool is lacking and the monitoring of the disorder is based primarily on patient report Moreover dealing with the financial aspects of CFS continues to be a major problem for patients so professionals with experience dealing with insurance companies explored this issue as well as ways in which CFS could be considered in a broader perspective of health care particularly focusing on governmental involvement The chapters provide an insightful overview of current clinical management of patients and guidelines for dealing with the disease and its complicating issues General topics of relevance covered in the book s chapters include a review of advances in basic science neurocognitive dysfunction diagnostic issues use of alternative complementary medicine cognitive behavioral and rehabilitative therapies financial issues advances in governmental role women s issues In this book practitioners and scientists in the field and patients living with CFS have a thorough resource on current clinical and patient management of the disease Letters, Essays, and Thoughts on Studies and Conduct Addressed to Young Persons by Men Eminent in Literature and Affairs Edited by Henry Barnard, LL.
