Fish Chemoreception T.J. Hara, 2012-12-06 This book describes in general how the chemosensory systems of fish function at various levels. In many ways fish are typical vertebrates differing only slightly from other vertebrates including humans. In other ways their aquatic environment imposes strict requirements or offers unique opportunities which have resulted in some unusual functions having no counterpart in higher vertebrates. This new volume is necessitated by advances in many vital areas as the field of chemical senses continues to grow at a rapid pace. Most significant is the application of the contemporary electrophysiological technique of patch clamping recognition of a second messenger system in chemosensory transduction processes and the identification of hormonal pheromones in fish reproductive behaviour. The last major synthesis of our knowledge about fish chemoreception *Chemoreception in Fishes* was published ten years ago Elsevier Amsterdam 1982. In that volume four aspects of fish chemoreception: the morphology of the peripheral chemoreceptors, primary sensory processes, roles in behaviour and its interactions with environment were discussed. This book is intended to be helpful to students, scientists and aquaculturists not only as a source book but also as a textbook on chemical senses.

IMIS 2025 was part of the 28th European Conference on Artificial Intelligence ECAI 2025 held in Bologna, Italy from October 25, 2025 to October 30, 2025. The book discusses emerging challenges related to implementing artificial intelligence (AI) in Management Information Systems (MIS). It explores the application of artificial intelligence (AI) across various business, technology and science domains and underlines AI's primary and fundamental role in revolutionizing management information systems by providing intelligent solutions to complex problems. The main focus is put on application of AI in supply chains, financial risk management and anomaly detection in networks. It also discusses the use of AI in banking, data management, e-commerce, education and sustainability, focusing on improving process efficiency and supporting decision making in dynamic business environments. It highlights implementation challenges such as costs, integration with existing systems and skill gaps, as well as the importance of human-computer interfaces and intelligent information management. The volume is divided into four major parts covering the main issues related to the topic. The first part presents application of AI concepts, methods and tools for supporting business processes. The second part focuses on developing intelligent methods for advanced decision support systems. The third part delves into research related to soft AI approaches, methods and tools for improving Management Information Systems. The fourth part addresses the research related to human problems in the broader process of interaction with the IMIS.
