Biology HI Paper 1 November 2008:

The Economics of Biofuels Stefania Bracco, 2016-06-17 Biofuels are a renewable source of energy used mainly for transportation. They link together food, energy and natural resources sectors and involve ecological, social and inequality issues. They are an emblematic example of the interactions between economic, environmental, social and political decisions and as a recent and complex issue require updated and detailed information to be understood. This book aims to shed light on several economic, social and environmental issues connected to biofuel production and policies. The Economics of Biofuels adopts detailed descriptions, rigorous data analysis and precise econometric methods to estimate the effects of biofuel on different socio-economic factors, avoiding complicated and sometimes ineffective models based on context-specific parameters. In particular, the book focuses on the impact of bioenergy policy on biocommodity production and trade and on the related phenomenon of land acquisitions to grow biofuel commodities. The book's main findings are derived by an original and unique dataset collecting information on the investors acquiring land in Africa and on the voluntary standard certification and labelling schemes adopted by them as Corporate Social Responsibility (CSR) strategy. The analysis links together in an original way public and private initiatives to make biofuel sustainable. Therefore, this book represents an improvement in the understanding of biofuel production and policy's sustainability. This book is of interest to those who study environmental economics, agricultural economics and sustainable development. It is also suitable for those in the renewable energy sector with a particular focus on biofuel sustainability.

Debating Human Genetics Alexandra Plows, 2010-07-20 Debating Human Genetics examines contemporary public debate on emerging developments in medical genetics including cloning, gene therapy, gene patenting, biobanks, genetic testing and screening and pharmacogenomics.

Energy and Sustainability II A. Mammoli, C. A. Brebbia, 2009-06-08 The way in which our society exists, operates and develops is strongly influenced by the way in which energy is produced and consumed. No process in Industry can be performed without sufficient supply of energy and without Industry there can be no production of commodities on which the existence of modern Society depends. The energy systems evolved over a long period and more rapidly over the last two centuries as a response to the requirements of Industry and Society, starting from combustion of fuels to exploiting nuclear energy and renewable resources. It is clear that the evolution of the energy systems is a continuous process which involves constant technological development and innovation. The presentation on the Second International Conference includes Renewable Energy Technologies, Energy Management, Energy Policies, Energy and the Environment, Energy Analysis, Energy Efficiency, Energy Storage and Management.
