**63rd International Congress of Meat Science and Technology** Declan Troy, Ciara McDonnell, Laura Hinds, Joseph Kerry, 2023-09-04 This book contains over 400 offered papers which were presented at the 63rd International Congress of Meat Science and Technology held in Cork Ireland from 13-18 August 2017 Under the theme of nurturing locally growing globally areas covered in the congress included meat sustainability and the role of the of meat science in a challenging global environment genetics and genomics the science of meat quality technological demands in meat processing from an Asian perspective international best practice in animal welfare scientific advances underpinning meat safety emerging technologies in meat processing meat science and impact consumer aspects meat biochemistry advancements in meat packaging and the congress ended with a session on meat and health with focus on sustaining healthy protein sources This year also included a session dedicated to addressing specific hot topics of importance to the industry and meat scientists These proceedings reflect the truly global nature of meat research and provide an insight into current research issues for the industry *Solid Phase Extraction: State of the Art and Future Perspectives* Victoria Samanidou, 2019-07-11 This book is a collection of 13 innovative papers describing the state of the art and the future perspectives in solid phase extraction covering several analytical fields prior to the use of gas or liquid chromatographic analysis New sorptive materials are presented including carbon nanohorn suprastructures on paper support melamine sponge functionalized with urea formaldehyde co oligomers chiral metal organic frameworks UiO 66 based metal organic frameworks and fabric phase sorptive media for various applications Solid phase extraction can be applied in several formats aside from the conventional cartridges or mini column approach e.g. online solid phase extraction dispersive solid phase microextraction and in syringe micro solid phase extraction can be very helpful for analyte pre concentration and sample clean up Polycyclic musks in aqueous samples 8 Nitroguanine in DNA by chemical derivatization antibacterial diterpenes from the roots of *Salvia prattii* perfluoroalkyl substances PFASs in water samples by bamboo charcoal based SPE parabens in environmental water samples benzotriazoles as environmental pollutants organochlorine pesticide residues in various fruit juices and water samples and synthetic peptide purification are among the applications cited in this collection All these outstanding contributions highlight the necessity of this analytical step present the advantages and disadvantages of each method and focus on the green analytical chemistry guidelines that have to be fulfilled in current analytical practices Modern Technologies and Their Influence in Fermentation Quality Santiago Benito, 2020-05-20 During the last few years industrial fermentation technologies have advanced in order to improve the quality of the final product Some examples of those modern technologies are the biotechnology developments of microbial materials such as *Saccharomyces* and non *Saccharomyces* yeasts or lactic bacteria from different genera Other technologies are related to the use of additives and adjuvants such as nutrients enzymes fining agents or preservatives and their management which directly influence the quality and reduce the risks in final fermentation products Other technologies

are based on the management of thermal treatments filtrations pressure applications ultrasounds UV and so on which have also led to improvements in fermentation quality in recent years The aim of the issue is to study new technologies able to improve the quality parameters of fermentation products such as aroma color turbidity acidity or any other parameters related to improving sensory perception by the consumers Food safety parameters are also included *Natural Polymers and Biopolymers II* Sylvain Caillol,2021-05-05 BioPolymers could be either natural polymers polymer naturally occurring in Nature such as cellulose or starch or biobased polymers that are artificially synthesized from natural resources Since the late 1990s the polymer industry has faced two serious problems global warming and anticipation of limitation to the access to fossil resources One solution consists in the use of sustainable resources instead of fossil based resources Hence biomass feedstocks are a promising resource and biopolymers are one of the most dynamic polymer area Additionally biodegradability is a special functionality conferred to a material bio based or not Very recently facing the awareness of the volumes of plastic wastes biodegradable polymers are gaining increasing attention from the market and industrial community This special issue of Molecules deals with the current scientific and industrial challenges of Natural and Biobased Polymers through the access of new biobased monomers improved thermo mechanical properties and by substitution of harmful substances This themed issue can be considered as collection of highlights within the field of Natural Polymers and Biobased Polymers which clearly demonstrate the increased interest in this field We hope that this will inspire researchers to further develop this area and thus contribute to futures more sustainable society

Mallikarjuna Swamy,2021-08-31 To meet the global food demand of an increasing population food production has to be increased by 60% by 2050 The main production constraints such as climate change biotic stresses abiotic stresses soil nutrition deficiency problems problematic soils etc have to be addressed on an urgent basis More than 50% of human calories are from three major cereals rice wheat and maize The harnessing of genetic diversity by novel allele mining assisted by recent advances in biotechnological and bioinformatics tools will enhance the utilization of the hidden treasures in the gene bank Technological advances in plant breeding will provide some solutions for the biofortification stress resistance yield potential and quality improvement in staple crops The elucidation of the genetic physiological and molecular basis of useful traits and the improvement of the improved donors

containing multiple traits are key activities for variety development High throughput genotyping systems assisted by bioinformatics and data science provide efficient and easy tools for geneticists and breeders Recently new breeding techniques applied in some food crops have become game changers in the global food crop market With this background we invited 18 eminent researchers working on food crops from across the world to contribute their high quality original research manuscripts The research studies covered modern food crop genetics and breeding plant molecular systems focusing to food crops plant genetic diversity QTL and gene identification utilizing high throughput genotyping systems and their validation new breeding techniques in food crops targeted mutagenesis genome editing etc abiotic and biotic stresses QTL gene identification and their molecular physiology plant nutrition grain quality improvement and yield enhancement *Insights in plant metabolism and chemodiversity: 2021* Laigeng Li,2023-02-03

**Molecular Architecture and Dynamics of Meiotic Chromosomes** Ricardo Benavente,Mónica Pradillo,Pedro A. San-Segundo,2024-03-11 Meiosis is a special type of cell division that allows the generation of haploid gametes and is a key process for sexual reproduction of animals plants and fungi Haploidization requires that meiotic cells undergo a series of unique processes namely pairing synapsis recombination and segregation of homologous chromosomes This involves profound meiosis specific changes in the protein composition and architecture of homologous chromosomes as well as of the condensation and folding of chromatin that require a critical timing and regulation Despite this enormous complexity different organisms may achieve haploidization through common molecular mechanisms A major goal of this article collection is to provide an overview of how meiotic chromosomes and their components are critically involved in the mechanisms of haploidization and how dynamic protein complexes yield important structural intermediates and temporal regulation to this process We welcome submissions of original articles mini reviews and review articles dealing with the composition architecture function and regulation of meiotic chromosomes of animals plants and fungi using microscopic biochemical molecular genetic and or omic techniques
