Jimenez,2023-02-28 **Minutes and Votes and Proceedings of the Parliament, with Papers Presented to Both Houses** Western Australia. Parliament,1973 **The Indian Journal of Agricultural Sciences** ,2018 *Survey of Current Business* ,1951 Genetic Diversity Assessment and Marker-Assisted Selection in Crops Francesco Mercati,Francesco Sunseri,2021-05-31 The exploitation of biodiversity is essential to select resilient genotypes for sustainable cropping systems as one of the main challenges for plant breeding Mapping traits of agronomic interest in specific genomic regions appears as another pivotal effort for the future development of novel cultivars For this purpose there is evidence that MAGIC and other exotic populations will play a major role in the coming years in allowing for impressive gains in plant breeding for developing new generations of improved cultivars This Special Issue focused on the application of advanced technologies devoted to crop improvement and exploit the available biodiversity in crops In detail next generation sequencing NGS technologies supported the development of high density genotyping arrays for different plants included in this issue **The Applications of New Multi-Locus GWAS Methodologies in the Genetic Dissection of Complex Traits** Yuan-Ming Zhang,Zhenyu Jia,Jim M Dunwell,2019-06-19 Genome Wide Association Studies GWAS are widely used in the genetic dissection of complex traits Most existing methods are based on single marker association in genome wide scans with population structure and polygenic background controls To control the false positive rate the Bonferroni correction for multiple tests is frequently

adopted. This stringent correction results in the exclusion of important loci especially for GWAS in crop genetics. To address this issue multi locus GWAS methodologies have been recommended, i.e. FASTmrEMMA, ISIS, EM, BLASSO, mrMLM, FASTmrMLM, pLARmEB, pKWmEB and FarmCPU. In this Research Topic our purpose is to clarify some important issues in the application of multi locus GWAS methods. Here we discuss the following subjects. First we discuss the advantages of new multi locus GWAS methods over the widely used single locus GWAS methods in the genetic dissection of complex traits, metabolites and gene expression levels. Secondly large experiment error in the field measurement of phenotypic values for complex traits in crop genetics results in relatively large P values in GWAS indicating the existence of small number of significantly associated SNPs. To solve this issue a less stringent P value critical value is often adopted, i.e. $0.001 / (0.0001 \times m)$ where m is the number of markers. Although lowering the stringency with which an association is made could identify more hits, confidence in these hits would significantly drop. In this Research Topic we propose a new threshold of significant QTN LOD = 3.0 or P value = $2.0e-4$ in multi locus GWAS to balance high power and low false positive rate. Thirdly heritability missing in GWAS is a common phenomenon and a series of scientists have explained the reasons why the heritability is missing. In this Research Topic we also add one additional reason and propose the joint use of several GWAS methodologies to capture more QTNs. Thus overall estimated heritability would be increased. Finally we discuss how to select and use these multi locus GWAS methods.

The Contribution of Universities Towards Education for Sustainable Development Walter Leal Filho, Thais Dibbern, Salvador Ruiz de Maya, María-del-Carmen Alarcón-del-Amo, Longinos Marin Rives, 2024-04-01. The book gathers inputs from universities and research organizations working on matters related to sustainable development in a variety of contexts. It also provides a platform for the dissemination of information on the latest initiatives paving the way for technology transfer and networking. Furthermore the book intends to provide a fertile basis upon which universities may cooperate more closely in this key area. Universities as centers of education research and innovation have a unique position and responsibility in promoting sustainability. They can offer degree programs, courses and workshops focused on sustainability, environmental studies and related fields, educating students and the wider community about the principles and challenges of sustainability. Also universities can conduct cutting edge research to address sustainability challenges such as climate change, resource depletion and biodiversity loss. They can develop innovative technologies and solutions that promote sustainable practices in various sectors including energy, agriculture, transportation and urban planning. There is a perceived need to better understand and engage universities further on sustainability initiatives. Against this backdrop and in order to facilitate a broad discussion on the contribution of universities toward sustainability this book is being produced. Last but not least a further aim of the book is to present methodological approaches and experiences deriving from case studies and projects which aim to show how sustainability may be incorporated as part of university programs.
