Findlay, Jérôme Comte**

## Agriculture Science P2 Grade November 2014:

*The Indian Journal of Agricultural Sciences*, 2014-07      Sustainable Livestock Production in the Perspective of Food Security, Policy, Genetic Resources, and Climate Change Asian-Australian Association of Animal Production Societies. Congress, 2014 Proceedings that contains a total of 754 abstracts consists of 368 papers for oral presentation and 386 papers for poster Preface      **Daily Graphic** Ransford Tetteh, 2014-04-09      *There's No Pill for This* Michaël Friedman, 2020-11-06 I truly recommend *There's No Pill for This* because it contains the wisdom of a health care professional who also has the experience of being a patient Bernie Siegel MD author of *No Endings Only Beginnings* and *Love Medicine* mindfulness therapy physical therapy and a wide range of beneficial lifestyle adjustments related to exercise sleep routines time management stress management and more He also offers special advice for supporting healthy bladder and bowel function and improving oxygen supply In the book's conclusion Dr Friedman reflects on what this complicated chronic disease has taught him and continues to teach him about the value of humility and about what is truly important in life      Microbial Responses to Environmental Changes Jürg B. Logue, Stuart E. G. Findlay, Jérôme Comte, 2016-01-20 Advances in next generation sequencing technologies omics and bioinformatics are revealing a tremendous and unsuspected diversity of microbes both at a compositional and functional level Moreover the expansion of ecological concepts into microbial ecology has greatly advanced our comprehension of the role microbes play in the functioning of ecosystems across a wide range of biomes Superimposed on this new information about microbes their functions and how they are organized environmental gradients are changing rapidly largely driven by direct and indirect human activities In the context of global change understanding the mechanisms that shape microbial communities is pivotal to predict microbial responses to novel selective forces and their implications at the local as well as global scale One of the main features of microbial communities is their ability to react to changes in the environment Thus many studies have reported changes in the performance and composition of communities along environmental gradients However the mechanisms underlying these responses remain unclear It is assumed that the response of microbes to changes in the environment is mediated by a complex combination of shifts in the physiological properties single cell activities or composition of communities it may occur by means of physiological adjustments of the taxa present in a community or selecting towards more tolerant better adapted phylotypes Knowing whether certain factors trigger one many or all mechanisms would greatly increase confidence in predictions of future microbial composition and processes This Research Topic brings together studies that applied the latest molecular techniques for studying microbial composition and functioning and integrated ecological biogeochemical and or modeling approaches to provide a comprehensive and mechanistic perspective of the responses of microorganisms to environmental changes This Research Topic presents new findings on environmental parameters influencing microbial communities the type and magnitude of response and differences in the response among microbial groups and which collectively deepen our

current understanding and knowledge of the underlying mechanisms of microbial structural and functional responses to environmental changes and gradients in both aquatic and terrestrial ecosystems The body of work has furthermore identified many challenges and questions that yet remain to be addressed and new perspectives to follow up on *The Applications of New Multi-Locus GWAS Methodologies in the Genetic Dissection of Complex Traits* Yuan-Ming Zhang, Zhenyu Jia, Jim M Dunwell, 2019-06-19 Genome Wide Association Studies GWAS are widely used in the genetic dissection of complex traits Most existing methods are based on single marker association in genome wide scans with population structure and polygenic background controls To control the false positive rate the Bonferroni correction for multiple tests is frequently adopted This stringent correction results in the exclusion of important loci especially for GWAS in crop genetics To address this issue multi locus GWAS methodologies have been recommended i e FASTmrEMMA ISIS EM BLASSO mrMLM FASTmrMLM pLARmEB pKWMEB and FarmCPU In this Research Topic our purpose is to clarify some important issues in the application of multi locus GWAS methods Here we discuss the following subjects First we discuss the advantages of new multi locus GWAS methods over the widely used single locus GWAS methods in the genetic dissection of complex traits metabolites and gene expression levels Secondly large experiment error in the field measurement of phenotypic values for complex traits in crop genetics results in relatively large P values in GWAS indicating the existence of small number of significantly associated SNPs To solve this issue a less stringent P value critical value is often adopted i e  $0.001 \times 0.0001$  and  $1/m$  m is the number of markers Although lowering the stringency with which an association is made could identify more hits confidence in these hits would significantly drop In this Research Topic we propose a new threshold of significant QTN LOD 3.0 or P value  $2.0 \times 10^{-4}$  in multi locus GWAS to balance high power and low false positive rate Thirdly heritability missing in GWAS is a common phenomenon and a series of scientists have explained the reasons why the heritability is missing In this Research Topic we also add one additional reason and propose the joint use of several GWAS methodologies to capture more QTNs Thus overall estimated heritability would be increased Finally we discuss how to select and use these multi locus GWAS methods

Clinical Obesity in Adults and Children Peter G. Kopelman, Ian D. Caterson, William H. Dietz, Sarah Armstrong, Arianne N. Sweeting, John P. H.
